Shock Of Quake 'Absorbed' By Great Distance

(Canadian Press)

The wilderness between Quebec City and the Saguenay River 125 miles to the north was believed by Dr. E. A. Hodgson, Dominion seismologist, to have absorbed the shock Thursday of a major earthquake, which probably would have caused wide destruction and loss of life if it had occurred in a populated centre.

Dr. Hodgson stated late yesterday that he believed the epicentre of the quake to lie in that area.

The quake, starting about five minutes to 7 a. m. EST, was felt in eastern Canada and as far west as Ohio in the United States.

Although seismographs in several cities recorded a major earthquake, reports from scores of centres told only of minor tremors, causing no damage or casualty.

Dishes were rattled and windows shook in Quebec City, Montreal, Moncton, N. B., Toronto, Hamilton and Owen Sound, Ont. North Bay and New Liskeard, in Northern Ontario, also felt the tremors.

Seismographs recorded an earthquake of half an hour's duration, but the tremors reported by citizens lasted only up to three minutes.

Rev. James J. Devlin, seismologist at Weston College, Boston, said the earthquake was a "very strong one" and that in a populated centre it "probably would have caused wide destruction and loss of life."

C. N. R. Notes

Mr. Laurie Cormier, General Superintendent of motive power's office, Moncton, N. B., was relieving Mr. William Davies who was away on holidays. Mrs. Cormier accompanied him to the Island. They both speak very highly of the hospitality received while here.

Mr. E. W. MacKinnon, superintendent, accompanied by E. R. Boyer accountant were in Moncton this week on railway business.

Mr. Harry L. Johnson, travelling accountant of the regional auditors staff was on the Island this past two weeks making a check of the accountants and roadmaster's office staff here, he left for home Thursday.

The many friends of Ernest Cameron, engineer, will be glad to know that he is feeling better after his recent illness.

Mr. Harry Redmond, blacksmith helper, Charlottetown, has been retired on pension October 1st. Mr. Redmond entered the railway service as laborer in the Mechanical Department on April 1st, 1916. He is at present visiting his daughter at Edmundston, and with his host of friends we wish him many years of healthy retirement. He is being replaced by Mr. Percy Crozier of New Carlisle.

Mr. W. H. MacLeod, roadmaster, accompanied by his wife is spending a few days at Sydney and vicinity. While there they will visit their son Norman who is attached to the signalling corps.

The railways continue to show weekly increases in their earnings; this is all to the good as for some time past it has been the other way. However we cannot go by these figures too much whichever way they show as the railway is one of the Dominion Government's biggest industries and as such, has to be run to the people's satisfaction at all times, regardless of increase or decrease.

The many friends of William Pickering, deckhand S. S. Charlottetown, Borden, will be sorry to learn of his illness and hope to see him on duty soon again.

Mr. J. K. Arbing, Agent, Bedford, motors to the City every Friday night to bowl with other members in the Railway League.

Mr. Robert Nelson, Chief clerk superintendent's office, has just harvested a bountiful crop of seed potatoes. Bob says they are even better quality this year. Now is the time for people to be investing their surplus money in farms according to the Ministers of agriculture of all the provinces, in this way we do our part to further the cause of the Empire.

Mr. E. A. Large accompanied by his wife left this week for New York, on his annual vacation, while there they will visit the Fair. He is being relieved by F. W. Gallant.

Mr. E. W. Beer, freight office staff, accompanied by Mrs. Beer spent the weekend in Saint John.

Miss Grace D. Blenkhorn, traffic department, spent the weekend in Saint John, leaving here Saturday morning by plane, catching the train at Moncton.

Mr. Vincent Murphy, agent, St. Peter's, is spending his annual vacation; he is being relieved by the Relief Agent of the Island Division.

Mr. John MacQuaid, Agent, Alberton, is on his holidays this week, he is being relieved by Earle G. Campbell.

The S. S. P. E. I., which has been undergoing its annual repairs at Bruce Stewart and Company's wharf dock will soon be returning to Borden. This is the first time for 8 or 9 years that a local firm has had the job. There is no reason why the Island should not have this work each year.

MRS. JAMES MACLEAN

The death occurred in the Prince Edward Island Hospital yesterday of Mrs. James MacLean, aged 84. She had entered the hospital on Sunday evening.

Mrs. MacLean's maiden name was Sarah Ann MacMillan. Her husband who was a native of West River and who was formerly on the Customs staff, predeceased her a number of years.

Mrs. MacLean conducted a boarding house on Prince Street for a number of years. She was a most estimable woman and her death will be learned with regret by many friends.

She is survived by a stepdaughter, who is at present residing in the United States, and one sister, Mrs. J. R. Allan, of this city.

Eggs given a new treatment devised by Government scientists and known as the vacuum-carbon dioxide oil treatment can be kept in cold storage for six months in practically as good condition as when they were stored.

National Temperance Study Course For Sunday Schools

(Continued from page 3,

cohol base and a variety of flavours, taken on an empty stomach) "produces a greater effect on the central nervous system (and therefore first on the judgment, caution, etc) than three times the amount of alcohol administered otherwise." He continues, "At an age when young people used not to be allowed to touch alcohol in any form, they now acquire a taste for ardent spirits presented in such a way as to exert their fullest effects in the shortest possible space of time." We know, too, that in adolescence the whole nervous system of the boy or girl is at its most unstable stage, and that the poisonous, narcotic effects of alcohol work most harmfully then.

In reply to a question made during the investigaton spoken of above, as to what type of person most often became a liquor addict, Dr. Stocker of Vienna University replied, "There are two main types: (1) The Club Table alcoholic, who is a sociable, likeable fellow, cheerful and pleasure-seeking; (2) Many others who have a very strong urge to worthiness, who began drinking to escape fatigue, and with growing habituation have fallen in time to alcohol addiction." To this group belong only too many of our once worthwhile citizens who began with the little, thinking that they knew when and how to stop, but the habit-forming property of the narcotic drug alcohol caught them out.

Quite frequently you will hear it said: "A party is so dull without liquor to liven it up." Why is it dull? And how is it livened up? Tongues may be loosened and the fun more hilarious, and the drinkers may think they are being very clever and witty, but it is surprising what rubbish will pass for wit when people have doped their higher brain centres. A university student who used to drink at his college parties became a member of the football team and of course was no longer allowed to drink any alcohol because it would spoil his efficiency as a player. He tells how he went to the next college party, and was surprised to find how childish all the so-called wit of the cocktail-enlivened party seemed to his undrugged mind. And this is not an only case. Twice in one week has the writer read two more true stories exactly similar to this—one of a business woman, and one of a man journalist, who having ceased to drink themselves for the sake of efficiency in their business, said how surprised they were to find what rubbish passed for wit among their drinking friends. Of course you want fun at your parties. Every one does, but you want the right kind of fun, and as Lady Astor has said, "When I am having a good time, I do like to be in my senses enough to know what sort of a good time I am having." It may take courage to say "No" when all the others are drinking, but why we should feel this way about liquor it is hard to see. If you are in training, you can refuse to eat rich chocolate cake and ice-cream without any one thinking it strange. Why do we not create the same attitude towards liquor, and at least leave people alone to do what they think is right? After all it is our own business, not theirs. But do let us have the courage of our convictions. Do not let us be so spineless and weak-kneed that we cannot take some teasing. Take it good-naturedly, but be firm and you will be surprised how soon others will join with you. Many a young person at our parties is only waiting for some one else to have the pluck to start the fashion against drinking, and friends who are worth while will admire you for your courage.

QUESTIONS

1 what are the reasons why beverage alcohol is a problem to the young people? Value 10 marks.

2. What can you do about it? Value 10 marks.

Waterway Plan Unopposed Now By Hepburn

TORONTO, Oct. 19 —(CP)—The Financial Post today published a copyright despatch from Ottawa stating Premier Mitchell Hepburn of Ontario, stout opponent of the St. Lawrence waterway development plan, has withdrawn his objection.

"I have no comment to make on that," Mr. Hepburn said this afternoon when informed of the report.

"When Premier Hepburn visited Prime Minister King recently to offer Ontario's co-operation in the national war effort, it is understood he told the Prime Minister frankly that he was now prepared to co-operate in completing the seaway project," the Financial Post story said.

The despatch said completion of the $500,000,000 seaway and power project as an immediate undertaking had become a distinct possibility with Premier Hepburn's decision.

The Ontario Premier repeated many times in the last four years his assertion that the Ontario Government would strenuously oppose the development. He said Ontario did not require power from the St. Lawrence.

Believes U. K. May Increase Cheese Imports

KEMPTVILLE, Ont., Oct. 19 —(CP) —Probability the United Kingdom may desire to increase cheese imports as a result of the war was seen here today by J. F. Singleton, associate director of marketing service, department of agriculture.

In an address to the eastern creamery and butter makers convention, Mr. Singleton said that cheese was a suitable item in troop rations. Cheese was used to a considerable extent during the last war and was being used in the present conflict.

Summarizing the dairy products situation as a result of the war, Mr. Singleton said that definite information was lacking regarding the extent to which the United Kingdom may desire dairy products. Data concerning quantities of different commodities received from various countries before the war was helpful in appraising possible future demands.

The United Kingdom imports annually between 300,000,000 and 335,000,000 pounds of cheese, he said. About 11 per cent comes from non-empire countries, principally from the Netherlands, Switzerland and Italy.

Cheese imports from non-empire countries were of the luxury type such as Roquefort, Camambert and Gorgonzola. Of the 89 per cent derived from empire sources, about 56 per cent was supplied by New Zealand, 23 per cent by Canada and 10 per cent by other empire countries.

QUART FOR FIGHTERS

PARIS — (CP) —Two pints of wine a day are considered necessary to keep the Frenchman in the front lines fit for fighting. But behind the lines the poilu gets only one pint.

CORN PUDDING

1-3 cup quick cooking tapioca
1 1-4 teaspoons salt
Dash on cayenne
2 cups milk
2 eggs, slightly beaten
2 cup cooked corn
1 teaspoon onion, finely chopped
2 tablespoon parsley chopped

Combine tapioca, salt, cayenne and milk in top of double boiler. Place over rapidly boiling water and bring mixture to scalding point. Cook 5 minutes, stirring frequently. Remove from boiling water. Pour slowly over slightly beaten eggs, stirring vigorously. Add corn, onion and parsley, and mix well. Pour into greased baking dish. Bake in moderate oven (350 degrees F.) in a pan of hot water 1 hour and 15 minutes. Serves 6.

Heavy Rains Renew London Flood Dangers

LONDON, Oct. 19—(CP CABLE) —Heavy rain tonight caused renewed fears among English families of flooded Bedfordshire, Buckinghamshire and Northhamtonshire areas, many of whom were driven to upper floors of their houses by floods during the last 48 hours.

Three feet of water still barred main roads into Newportpagnell, Buckinghamshire according to latest reports. Mails were delayed five hours. Families regaining their homes were carried in trucks big enough to travel through the water without stalling. Many households had to enter homes through upper-storey windows.

Men in a punt were credited with rescuing many people from seriously threatened house in Lake Lane, between the House River and the Grand Union Canal, which bore the main brunt of the flood. Workmen were repairing a breach in the canal tonight, and two feet of water still stood about Lake Lane houses.

Herds of cattle were swept away as the flood waters poured down the Ouse Valley into Bedfordshire. The high waters subsided slowly in Buckinghamshire and Leicestershire, but conditions were worse than ever farther east.

Found Guilty In Liquor Case

HALIFAX, Oct. 18—A Supreme Court jury, after deliberating nearly six hours, tonight found William Babineau of Moncton, N. B. and Thomas Slattery, Saint John, N. B., guilty of conspiring to defraud the Federal Government through illegal liquor activities.

Slattery was convicted of conspiracy as defined under the Excise and Customs Acts and the Criminal Code. Babineau was found guilty under the Excise and Customs Acts and the Criminal Code but acquitted on the third count. The cases arose out of the seizure by Royal Canadian Mounted Police 13 months ago of a truckload of liquor valued at $17,000. The seizure was made in Halifax County.

Thirty eight witnesses testified during the seven-day joint trial. The two New Brunswick men will be sentenced at the end of the session.

A grand jury meanwhile returned true bills against 10 Nova Scotians also charged with conspiracy to defraud the Government through liquor running, bringing to 12 the number who must face trial, and will deliberate on the fate of six others tomorrow.

All are members of a group of 24 the R. C. M. P. charged with conspiracy to defraud the Federal Government of $4,000,000.

Support Peace Efforts In Baltic

WASHINGTON, Oct. 19—In a dramatic move initiated by Argentina, the 21 American Republics applied the weight of their moral influence today in support of the efforts of Scandinavian countries to preserve peace in the Baltic.

President Roosevelt, in conjunction with 21 South American Republics, sent an encouraging message to King Gustav V of Sweden, who is acting as host to a neutrality conference in Stockholm attended by the Kings of Norway and Denmark and the President of Finland.

The cablegram said:—

"Under the circumstances which exist this Government joins with the Governments of the other American Republics in expressing its support of the principles of neutrality and order under law for which the nations represented at the Stockholm conference have, throughout their history, taken a consistent stand."

Many Canadians Under Training In R.A.F. Camps

By GUY E. RHOADES
Canadian Press Staff Writer

LONDON, Oct. 20—(CP) — At many points throughout this land, thousands of young men have gone back to school to learn the grim business of war in the air. Lightheartedly, as if they were taking instruction at aero clubs, they prepare to defend Britain's shores and cities or to drop steel and death on the enemy abroad.

Many Canadians work among the lads who sit at desks, work in hangars or fly off secret airports, hidden among the greenery of England's smiling countryside. Some Canadians joined up after war was declared, most had arrived before, paying their own attending flying schools.

At the armistice 21 years ago, 1,200 pilots a month left schools and the peak had not been reached. More than 2,000 instructors were working with them at that time, using 7,100 air-craft. In addition to pilots there were 283,000 other trained personnel.

Four years ago when the first major expansion of the R.A.F. was authorized the total strength was 31,000, but before the outbreak of the Second Great War the number of regular personnel had increased almost fourfold.

Besides that, the Auxiliary Air Force and various Air Force reserves had an authorized establishment this year almost eight times greater than in 1935. Figures for pilot output have not been published in recent years but the annual intake since expansion started has been from five to eight times the pre-expansion figures. In addition the entry of observers, radio operators and gunners has increased greatly.

Training at Start

Even before the war new schools sprang up all over the country, covering huge acreages and containing all the necessities and amenities of small towns. Their programs have not been revised since the war started and a new type of school, known as the Initial Training Wing, has been created.

At the Initial Training Wing recruits learn in a comparatively short time discipline, administration and ground drill, studying simultaneously such subjects as the theory of flight, air navigation, gunnery bombing, morse telegraph and airmanship.

From there they go to Elementary Training Schools where they learn to fly light types of aircraft such as are used by flying clubs in Canada. Then they graduate to Service flying schools where they learn to fly operational types of planes and continue studying subjects they started in the Initial Training Wings. They get their "wings" on graduation from the intermediate stage of the service schools and many leave the advanced stage of the same schools with the rank of acting pilot officer.

Use Minard's for bites.

AIR RAID PRECAUTIONS

OTTAWA, Oct. 19 — (CP) — Thorough study of air raid precautions has been carried out across Canada by the department of pensions and national health since start of the war, it was announced here today.

Departmental officers visited the maritimes, Quebec and British Columbia where provincial committees were established. The dominion department acted in advisory capacity to the committees.
