WM. MURPHY, Manager.
 March 10, 1856.

GENERAL INTELLIGENCE.

GENERAL OPINIONS OF BRITISH SOLDIERS.
 —A correspondent, just from Paris, states that the most striking sight on the Boulevards and other places of resort is the vast number of French soldiers with the Victoria Crimean medal on their breasts. The men and officers wear it with great pride, and it contrasts nobly with their little bits of orange and yellow ribbon and small crosses. I asked one man, what he would have said, if any one had told him five years ago, that he would be wearing a British decoration? He answered, 'Oh, Monsieur, les Anglais sont no sires a present. Il faut oublier le passe. Et, voyez vous, c'est bien distinguee celle Victoria!' During my stay, I was one day conversing with a French General on subjects connected with our army and certain contemplated changes. He is a Crimean officer, and he said, 'Believe me, that your army is the finest in the world. You have little to learn from us. Imitate us as little as possible. As you have to do is to give your officers a better 'education militaire,' and to teach your men in peace time to study the shifts and expedients of war.' He held the view that this was the universal opinion of French officers, I heard a good argument in favour of the peace from the other side:—"You English don't relish the peace, because you don't think you have done enough, and are in a state now to do anything—except war—you have done wonders with your small army. Alma, Inkerman, and the repulse of sorties speak for you. If you were to fight for six months more, you might do something, and so might we, but it is uncertain. The Russians are well fortified and in great force. If you and we succeeded, we should be in no better position to demand peace than we are now; that is, the milk ducts of the young obtain better terms; and if we failed, there would be dissatisfaction in England and revolt in France."—United Service Gazette.

ART or MILKING.

—The art of milking is not taught in a hurry. It requires long practice to milk properly, and therefore all the young people on a farm ought to be shown how the labour should be done. It is quite important, that this branch of the dairy should be particularly attended to, for a good milk is obtained in great quantity from the same cow than a poor milk. The first lesson to be taught to young people is gentleness and kindness to the cows. They never need be treated harshly, for a good milk is obtained in great quantity. Cows that have been caressed and uniformly well treated are fond of having the milk drawn from the udder at the regular time of milking, for it gives them relief from the distention of the milk ducts. Let your people be put to milking the farrow cows first, or such as are to be soon dried, and then the less from bad milking will be less injurious; the hand should extend to the extremity of the teats, for the milk is then drawn easier. They should be taught to milk as fast as possible. More milk is always obtained by a rapid milker, than a slow one. They should be taught to be taught to think of the cow as a white milking, and no conversation must be permitted in the milk-yard. They should sit up close to the cow, and rest the left arm gently against her flank. The right hand rests her foot on account of pain occasioned by soreness of the teats, the nearer the milker sits to her, and the harder he presses his arm against

her leg, the less risk will be run of being injured. Cows may be taught to give down their milk at once, and they may be taught to hold it a long time. The best way is to milk quick, and not to use the cow to a long stripping, or an after-stripping.

MIXING OIL OF LAVENDER.

Lavender is grown to an enormous extent at Mitcham, in Surrey, England, which is the seat of its production in a commercial point of view. Very large quantities are also grown in France, but the fine odour of the British produce realizes in the market four times the price of that of Continental growth. Half a hundred weight of good lavender flowers yields, by distillation, from fourteen to sixteen ounces of essential oil. All the inferior descriptions of oil of lavender are used for perfuming soaps and greases; but the best is entirely used in the manufacture of what is called 'extrait', or in keeping with the nomenclature of other essences prepared with spirit. The number of formulas published for making a liquid perfume of lavender, is almost endless, but the whole owing to the goodness of the lavender, and the lavender, simple; essence of lavender compound; and lavender water. There are two methods of making essence of lavender: 1st, by distilling a mixture of essential oil of lavender and lavender spirit, and the other—2nd, by merely mixing the oil and the spirit together.

Jenny Lind has addressed a letter to a friend in this country, in which she speaks in the warmest terms of Mr. Barnum, of whose reverse she has heard and says:—

He nor his shall never know want while have it in my power (which, owing to the goodness of Heaven I have now) to keep it away.

She says further, that the gift and charity contents given by her, while with Mr. Barnum, all sprang from him, and that he persisted, against her remonstrances, in giving her before the public the entire credit therefor. [New York Mirror.]

COPIES OF DANGEROUS CARBO.—SHIP

GEORGE, which arrived at Liverpool from Savannah, carried out some copper ore, which proved to be an exceedingly dangerous cargo, so great was the heat evolved during the passage, from the sulphur contained in the ore, that some of the cases were taken out of the ship completely charred, the lids being a mass of charcoal; while the cotton stored immediately above them was partially burnt, and when landed from the ship, was so hot as to make it painful for a man to thrust his hands into the bales. The Liverpool Albion states, that the copper ore from Adelaide, when first shipped to England, was of a similar dangerous character, till means were taken to destroy the sulphur by roasting the ore. In its present state, the ore from the mines of Georgia is not fit to cross the Atlantic and must undergo a process similar to that of the Australian ore, to remove all danger from it.

COVER.—It was a remark of this celebrated savant, 'that mankind is composed of hammers and anvils, and that it was much better to be a hammer than an anvil.'
