Model No. 20
Automatic
OIL RANGE

YOURS FOR JUST **384.00**
COMPLETE!

Of "Modern Canadian design," the new No. 20 Automatic marks the greatest step forward for the last twenty years in Oil Range appearance and efficiency.

Here for the first time is a Fully Automatic Oil Range. Here also for the first time is an Oil Range as smart and modern in appearance as the very best in Electric and Gas Ranges. Built into it is the experience gained by over sixty years in the manufacture of high quality cooking and heating equipment.

No lighting, no guesswork in cooking, simply set the thermostatic oven control to the temperature required and the range does the rest and maintains the exact temperature required. When cooking is finished, turn the dial to the "off" position, which cuts the flame to pilot and keeps it there ready for use at an instant's notice.

For over 60 years Enterprise has led the range industry in the production of the finest in smart design — the finest in quality materials — the finest in construction and craftsmanship.
