THE DAILY EXAMINER

THE LEADING DAILY NEWSPAPER OF P. E. ISLAND,

Issued every afternoon, from the office of the EXAMINER PUBLISHING COMPANY, in the London House Building, Queen Street.

RATES OF SUBSCRIPTION.
(IN ADVANCE)

ONE YEAR	$4.00
SIX MONTHS	2.00
THREE MONTHS	1.00
ONE MONTH	0.35

Sent post paid to any part of Canada or the United States

ADVERTISING RATES

For small advertisements which are ordered for only one or two weeks the charge is 50 cents per inch for the first insertion, and 25 cents for each continuation. Rate cards are furnished on application at the office. Special contract prices at a reduced rate are quoted for advertisements four inches in size or larger, which are to run for three months or longer.

No special notices inserted unless paid for at the rate of 10 cents per line, and under no circumstances will such paid notices appear in the local column.

Special discounts made on all advertisements connected with Church Fairs, Bazaars, Picnics, etc. No notices will be inserted with the same unless the regular rate of 10 cents per line is paid.

That THE EXAMINER is considered by our Merchants and Manufacturers to be the leading newspaper in P. E. Island, and consequently the most valuable advertising medium through which to make their announcements public, is abundantly proved by the fact that in order to accommodate our advertisers we have been compelled to enlarge the paper to its present size.

THE DAILY EXAMINER is for sale by the following agents:—

R. H. Mason, Post Office, Charlottetown
J. McIntyre, Malpeque Road, "
C. Paul, Lower Spring Park Road, "
W. M. Coffin, Grafton Street, "
S. Grey, cor. Water and Prince St. "
D. Chappell, Prince Street, "
Bazaar Store, Queen Street, "
Geo. Carter & Co., Queen Street. "
S. Gray, News Stall, P. E. I. Railway and on the trains.
M. & T. J. Walsh, Eclectic Bookstore, Summerside.
D. Sutherland, Souris.
Hon. D. Gordon, Georgetown.
D. A. Egan, Mt. Stewart.
G. M. Clarke, Alberton.
A. J. McNeil Stanley Bridge.

The Weekly Examiner

is issued every Friday morning from the publishers' office. It is made up of matter which has appeared in the Daily editions, and is a first-class weekly newspaper—interesting and full of the latest news.

The subscription for THE WEEKLY EXAMINER, post paid to any part of Canada or the United States, is one dollar per year.

Advertising rates on the same scale as given bove for THE DAILY EXAMINER.

Collegiate School for Boys.

WINDSOR, N. S.

106th YEAR.

HEAD MASTER—Mr. H. M. Bradford, M. A., Cambridge,
RESIDENT ASSISTANTS—Mr. G. M. Acklom, B. A., Cambridge; Mr. Lawrence Gent, B.A., Oxford,
with a large staff of visiting Professors.

The School possesses a well-equipped Gymnasium, with Instructor in attendance daily; also large music rooms, play room, library, cricket field, skating rink, running track, et. The Buildings are lighted by electricity and heated with hot water.

Junior Boys receive every care from the Lady Matron.

Pupils are prepared for business life or for any public examinations.

Michaelmas Term begins THURSDAY, September 6th.

Calendar for 1894-5, with full particulars, can be obtained from the Head Master.

KNOWLEDGE

Brings comfort and improvement and tends to personal enjoyment when rightly used. The many, who live better than others and enjoy life more, with less expenditure, by more promptly adapting the world's best products to the needs of physical being, will attest the value to health of the pure liquid laxative principles embraced in the remedy, Syrup of Figs.

Its excellence is due to its presenting in the form most acceptable and pleasant to the taste, the refreshing and truly beneficial properties of a perfect laxative; effectually cleansing the system, dispelling colds, headaches and fevers and permanently curing constipation. It has given satisfaction to millions and met with the approval of the medical profession, because it acts on the Kidneys, Liver and Bowels without weakening them and it is perfectly free from every objectionable substance.

Syrup of Figs is for sale by all druggists in 75c. bottles, but it is manufactured by the California Fig Syrup Co. only, whose name is printed on every package, also the name, Syrup of Figs, and being well informed, you will not accept any substitute if offered.

LIFE IN OTHER WORLDS

THE EVER-RECURRING QUESTION, ARE PLANETS HABITABLE?

Extracts From Advance Sheets of the Publications of the Astronomical Society of the Pacific—Prof. Holden Thinks the Question Will Soon Be Settled.

Percival Lowell has lately established an observatory near Flagstaff, Ar., at an elevation of 7,309 feet above the sea.

According to press telegrams, this station is connected with the Harvard College Observatory (director, Prof. Edward Pickering), and is to be under the charge of his brother, Prof. William Pickering of the Harvard Observatory, who has lately been director of the Harvard station in Arequipa, Peru.

I have just received a copy of the Boston Commonwealth of May 26, 1894, which contains a long account of a paper read by Mr. Lowell before the Boston Scientific Society on his new observatory and its plan for work. It is to be presumed that this abstract of Mr. Lowell's paper is authoritative; but as it is not signed by his name, he may not hold the views there expressed. I have quoted a few statements from this account because they seem to me to be very misleading and unfortunate, and all the more so because they are very well written, and in some respects quite true.

The Lowell Observatory, he says, is to be devoted to "an investigation into the condition of life in other worlds, including their habitability by beings like or unlike man." On this sentence I remark that any serious study of any planet by any means is, in its degree, a study of the conditions of life on that planet. A measurement of the angles of a crystal of fluorspar in a laboratory is part of a study of the conditions on earth. An accurate drawing of the planet Mars is, in its way, no doubt, a study of conditions of life on that planet. But I submit that the phrase, "the conditions of life," is very misleading. It holds out hopes that are very unlikely to be realized in the year of grace 1894, or during this century. What these hopes are is roughly indicated by the next phrase, "their habitability by beings like or unlike man. This is not the chimerical search some may suppose." The foregoing words seem to me to be especially misleading. Does the writer intend to say that there is any probability whatever that either of the two following questions can be settled within the next decade.

First—Are Mars, Venus, etc., inhabited?

Second—Are their inhabitants like (or unlike) human beings?

The words I have quoted seem to me to imply that there is a probability that these questions will soon be settled. But I think that nearly every living astronomer will agree with me in saying, as I do, that there is no reasonable probability whatever of any such settlement at the present time. The problem is one for the considerably distant future.

The Canals of Mars.

It may be that "the most self evident explanation of the markings on Mars is probably the true one; namely, that in them we are looking upon the result of the work of some sort of intelligent beings." It just may possibly be true, though by no means "self-evident;" but I, for one, declare that I cannot find a scintilla of evidence in favor of that view. The writer is speaking of the so-called canals of Mars. These are long, dark, narrow markings on a reddish background, and they are sometimes many hundreds, even thousands of miles long, and seldom less than 50 miles wide. Sometimes they are visible, and sometimes they are not; they appear and disappear; sometimes they are double and sometimes they are single. Does the foregoing sound like a description of canals. If it were, should we think these waterways were built by intelligent beings like ourselves or by madmen? Will not a canal 50 miles wide accommodate the shipping on Mars? And if more water surface is required, why not widen the canal? And, in the name of sane engineering, why fill it up every now and then?

Again, how does the writer know that the dark markings on Mars are water, and the red markings land? It may be so, but has it been proved? For my part I only know a couple of arguments in favor of this hypothesis and they are not conclusive. Finally, is it true that the large objectives of modern telescopes are especially well fitted to deal with faint contrasts like those on the planet Venus so as to hold out a reasonable hode of new discoveries "of the most important character" regarding this planet? I doubt it, speaking for myself; and I can give at least one good reason for my conclusion.

With these few remarks, which could be carried much further, I leave the paragraphs in question. They seem to me to hold out hopes that are not likely to be quickly realized, and therefore to to be suited to mislead rather than to lead the reader. They are all the more persuasive for being well written. But they tell only half truths; and the particular half truths that the whole human race would be delighted to have verified.

Mars as Seen From South America.

The very essence of the scientific habit of mind is conscientious caution: and this is especially necessary in referring to matters in which the whole intelligent world is interested—as the condition of the planet Mars, for example. I may take as an example the telegrams regarding Mars sent by cable from South Americ in 1892 by Prof. William Pickering who is to be the chief observer at the Lowell Observatory in Arizona. I quote two out of many such telegrams:

New York, Oct. 6, 1892.—The Herald correspondent at Valparaiso cables as follow: Prof. Pickering of the Harvard branch Observatory at Arequipa says that he has discovered 40 small lakes in "Mars."

How does he know the dark markings are lakes. And is he sure there are 40.

New York, Sept. 2, 1892.—Prof. Pickering of Harvard College sends the following to the Herald from Arequipa, Peru: Mars has two mountain ranges near the south pole. Melted snow has collected between them flowing northward. In the equatorial mountain range, to the north of the gray regions, snow fell on the two summits on August 5th and melted on August 7th. I have seen 11 lakes near Solis Lacus, varying in area from 80 by 100 miles to 40 by 40 miles. Branching dark lines connect them with two large dark areas like seas, but not blue. There has been much trouble since snow melted in the Arean clouds. These clouds are not white, but yellowish and partly transparent.

For Over Fifty Years.

AN OLD AND WELL TRIED REMEDY.—Mrs. Winslow's Soothing Syrup has been used for over fifty years by millions of mothers for their children while teething, with perfect success. It soothes the child, softens the gums, allays the pain, cures the colic, and is the best remedy for Diarrhœa. Is pleasnt to the taste. Sold by Druggists in every part of the world. Twenty-five cents a bottle. Its value is incalculable. Be sure and ask for Mrs. Winslow's Soothing Syrup, and take no other kind.—m. w. f. wkly—1 y

They now seem to be breaking up, but they hang densely on the south side of the mountain range. The northern green spot has been photographed. Many of Schiaparelli's canals have been seen single.

These and similar telegrams from South America regarding the happenings on Main in the year 1892 were received by the astronomers at the Lick Observatory with a kind of amazement. We were observing Mars at that time (and continuously during the whole of each night) with a 36-inch telescope under good conditions. We have considerably more than 100 drawings of the planet. Very many of Prof. Pickering's conclusions could not be derived from our Lick Observatory drawings which contained far more detail than his. Could they be justified by those he was making in Peru with a 12-inch telescope? This latter question could not possibly be settled in North America till we, also, saw the drawings on which Prof. Pickering's conclusions were founded, and accordingly we waited. When the Peruvian drawings were finally published it was at once obvious to all experts that they were not a sufficient proof of the reported discoveries. * * * They are still (June 1894) the only published evidence available regarding the observations made two years ago, in July, 1892. They do not agree with the conclusions so far reached at Mount Hamilton. For that reason we are justified in doubting them until convincing evidence is at hand, as it certainly is not now.

Regarding Jupiter's Satallites.

I may quote another telegram from Peru:

New York, Oct. 14.—The Hereld received the following cable from Arequipa, Peru, to-day: Jupiter's fourth satellite is very dark now. The third satellite is girdled by a very dark belt in the northern hemisphere, inclined 20 degrees to the orbit. It can be best seen during the transit. The second satellite is probably not spherical. The first satellite is egg-shaped and revolves end over end, and nearly in the orbital plane. Its period is 12 hours and 55 minutes. Pickering.

In other places Prof. Pickering has given details regarding his observations of the behavior of the satellites of Jupiter. Many of the phenomena he has observed might be explained if it is true that the object glass of his 12-inch equatorial rolls in its cells as the telescope moves in hour angle.—Prof. Ed. S. Holden.

MARY HARTWELL CATHERWOOD.

How She Came to Write a Romance of French Canadian Life.

The home of Mrs. Mary Hartwell Catherwood, whose romances of early French Canadian life and French exploration have won an international reputation, is at Hoopeston, Ill., about ninety miles from Chicago—near enough to admit of frequent tastes of city life. But Mrs. Catherwood is too busy a woman to spend much time away from home, unless in quest of "local color" for a new story. Besides furnishing short stories and sketches to various periodicals, she personally supervises the affairs of her household, being an essentially domestic woman. She also finds time to instruct her little daughter Hazel. Hazel, who is the only child, is her mother's devoted companion, and usually accompanies her on her journeys from home. Last year their summer was passed in Europe, where Mrs. Catherwood was able to gratify her acknowledged weakness for two varieties of curios—old silver and fine, old prints. Her husband shares these enthusiasms with her, and they have some excellent examples of each in their Hoopeston home, although Mrs. Catherwood demurely insists that her particular fad is her typewriter.

Mrs. Catherwood believes that the artist who paints word-pictures is as often at a loss to clearly express his ideal as is the sculptor or painter. He must often try again and again, and, so far as circumstances permit, he must refuse to be content with anything short of perfect expression of his inspiration.

The finish of her own work attests how faithfully she lives up to her creed.

"The Romance of Dollard" is a case in point. In 1883 Mrs. Catherwood was passing the summer in Canada, and chanced to witness the midsummer fete of "Sain' John de Ba'ti"—as the village patois has it. Among the floats was one representing Adam Daulace (or "Dollard" as his countrymen have affectionately corrupted it) and his men in the stockade.

Mrs. Catherwood's imagination was fired at once, and she set about securing access to the old "Relations" and Canadian records, with the result that when she returned to Illinois she carried with her the nucleus of that dramatic story and a mass of information bearing on the early colonial history which enabled her, two or three years later, to bring vividly before the readers the stirring history of "Dollard."

The Man Who Knows It All.

He bears within his massive girth the meat and essence of all worth. The stars round him revolve; the sky rests on his mighty shoulders high. And so he walks erect and grand, the solar system in his hand; and matched with him the sun looks small, the mighty man knows it all!

Then let the sun go out at noon and throw a towel o'er the moon; and let the stars remote and high, drop, like loose buttons, from the sky, and send to Night's Plutonian shores, your selectmen and sophomores: but spare him for the good of all, the mighty man who knows it all!

Ah! when he dies will wisdom die, the sun of knowledge leave our sky, and we'll be left in dark and doubt, like Moses when the light went out. Oh! leave us not in darkness blind, thou luminary of mankind, through dark blind ways to grope and fall, oh, wondrous man who knows it all!

Give to the vulture and the shark your statesmen and your men of mark; give to the beasts who know no pity, the members of your school committee; let bear and lion do their work upon your learned city clerk; spare not the mighty and obese and portly justice of the peace; but save, oh save, we humbly call, the wondrous man who knows it all!

With him all truth, all lore begins; omniscience and this man are twins. All wisdom's water mains outspread, from the main cistern of his head. And should this mighty cistern burst, then all the schools would die of thirst. So spare, kind fate, we humbly call, this wondrous man who knows it all!

A Railway Manager Says:

"In reply to your question do my children object taking Scott's Emulsion, I say No! On the contrary, they are fond of it, and it keeps them pictures of health."

Priestley's Cravenettes are really the only satisfactory goods for ladies' waterproof garments. They come in Navy, Myrtle, Brown, Grey, Casto and Black. The name of Priestley is so well known as a manufacturer of high dress materials that Cravenettes bearing this name and rolled on the Varnished Board may allways be relied upon.
