

BBG Urges TV Agreement For Coverage Of Grey Cup

OTTAWA — (CP) — The CBC has accepted an offer from the privately owned CFTO-TV network to provide, free of charge, this year's Grey Cup football game for use on the coast-to-coast network. President J. Alphonse Outlet announced Tuesday.

Mr. Outlet's office released the text of a letter to John Bassett, chairman of CFTO-TV Toronto which is a member of the CTV network, accepting the offer made by Mr. Bassett June 7.

"We are pleased that these arrangements will enable the

corporation to serve the national audience with coverage of this important sports event," the letter said.

The CBC acceptance of the offer followed urging by the Board of Broadcast Governors at a meeting here Monday.

The BBG also announced it has turned down a private broadcaster's bid for a new French-language TV station in Quebec City and has deferred a decision on the CBC's application for a similar station there.

Decisions on the highly-contested competing applications

for the Quebec City outlet had been pending since February and last week two BBG members, Dr. Eugene Forsey and Professor Guy Hudon, resigned from the board in protest that the BBG hadn't recommended that the CBC get the TV licence.

In other decisions, the BBG recommended licences for a new French-language TV station at Chiboucti, Que., and a new radio station at Dartmouth, N.S. It turned down a proposal for a new French-language TV station at Ste. Anne des Monts, Que., in favor of a rebroadcast-

ing station at Mont Clément to relay programs to the area from another station.

RECOMMENDS APPROVAL

It also recommended approval for nine proposed TV rebroadcasting stations — two in Nova Scotia at Bayview and Amherst.

The BBG statement on TV coverage of the Grey Cup football final gave few details. But it was apparent that the board still holds to the view it expressed last fall that the public interest in seeing "major sports events, particularly those involving teams representing the regions of Canada," should be protected.

It said Monday that it discussed the 1962 Grey Cup coverage with representatives of the CBC and CTV networks during N.S. It turned down a proposal for a new French-language TV station at Ste. Anne des Monts, Que., in favor of a rebroadcast-

ing station at Mont Clément to relay programs to the area from another station.

CTV HAS PURCHASED TV RIGHTS

CTV has purchased TV rights to the game, to be played in Toronto Dec. 1. John Bassett, chairman of CFTO-TV Toronto which is a member of the CTV network, said last week the telecast of the game will be offered without charge to the CBC, including CBC stations in competition with CTV member stations.

CONTINUE TALKS

On the question of a new TV station at Quebec City, the board said it is reserving decision on the CBC application in order to continue discussions with the CBC "on future policies of the CBC for the extension of the national service."

The application would be reconsidered at a later hearing.

It recommended rejection of the private-station application by a group headed by Jacques LaRoche, Quebec City radio broadcaster and former private secretary to the late premier Paul Sauve.

The board said the proposed private station "would not possess the network facilities to reflect the image of the capital city of Quebec to the rest of the country."

In addition, the BBG wasn't satisfied with proposal local programming plans and said coverage would omit several populous centres in the Quebec City area.

STATION OPPOSED

The new TV station at Chiboucti, sought by a company headed by Chiboucti businessman John Murdoch, would be on Channel 6. It had been opposed by CKRS-TV Jonquiere, and by a group of three radio stations in the area who said they also wanted to apply for a Chiboucti TV licence.

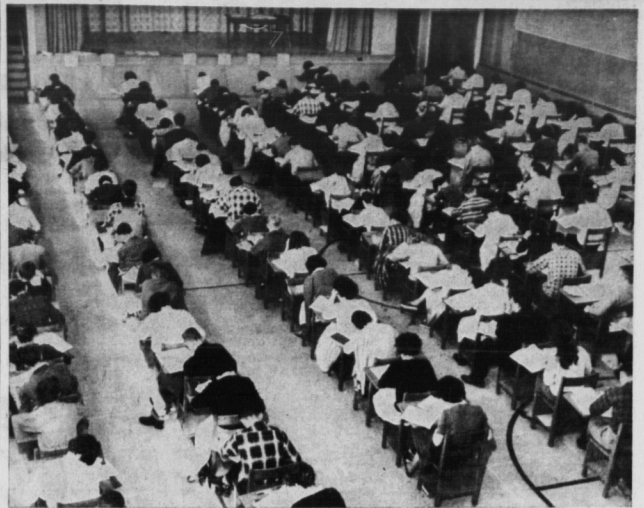

In rejecting the bid by T. V. Transgaspenne Inc. for a new TV station at Ste. Anne des Monts, at the south end of the Gaspé Peninsula, the board said the area cannot support an additional station at the present time.

Instead, it approved a bid by CKBL-TV Matane, Que., for a TV rebroadcasting station at Mont Clément to serve the Matapédia Valley.

The new Dartmouth, N.S., radio station was sought by a four-man group headed by Donald R. Blois, formerly with the CBC and CICH-TV Halifax. The five-kilowatt station would be at 790 on the dial.

The TV rebroadcasting stations at Bayview and Amherst, N.S., would be linked with CICH-TV Halifax.

The board also recommended

EXAM TIME ONCE AGAIN

This picture was taken in the gymnasium at the Montague Regional High School this week but the scene is common to most regional high schools and other schools throughout the province as students buckle down to the final examinations. By writing in large auditoriums it is easier to supervise especially from a vantage point such as the spot from which this picture was taken. Spaciousness and brightness also add to the comfort of those writing the exams.

approval of a number of other applications for power increases and technical changes at existing stations. The details: CBY Corner Brook, Nfld., increase in power to 10 kilowatts from one kilowatt.

CKTM-TV Trois-Rivières, Que., increase in video power to 162.5 kilowatts from 42.5, increase in audio power to 81.2 kilowatts from 21.2, and increase in antenna height to

1,223 feet from 555.

CJEM Edmundston, N.B., increase in daytime power to five kilowatts from one kilowatt.

CHSJ and CHSJ-TV Saint John, N.B., change of studio site.

QUEER FISH

A type of catfish common to the Nile and some other African rivers normally swims and floats upside down.

ment as a result of a Royal Commission recommendation in 1956, the plant has been used for processing salt codfish.

If we were Mr. Cheeseman said, B.C. Packers will convert and enlarge it to provide for large-scale activities in production of frozen fish and fishmeal manufacture.

No purchase price for the plant was announced. Some 300 persons will be employed.

Mr. Cheeseman said the company will operate five deep-sea draggers to serve the plant, and has undertaken to make every effort to develop the in-shore and near off-shore fisheries in the area.

Hon. J. Angus MacLean

Mrs. Margaret Macdonald

Premier W. R. Shaw

COME AND MEET THE HON. J. ANGUS MacLEAN

PREMIER W. R. SHAW AND MRS. MARGARET MACDONALD

Kings County Progressive Conservative Ass'n.

25 years of dependable airline operation.

In dependable airline operation, little things can be most important. Small jobs done carefully indicate a concern for detail that adds up to dependability. Because of its passion for care and detail, TCA is regarded by many as the world's most dependable airline. But comparisons are hard to make. All airlines today have high standards in the things that contribute to dependability.

Comparisons aside, Canadians can measure the dependability of their airline in this 25th anniversary year by these facts:

- No airline in the world has better qualified flying personnel. Before becoming Captains or First Officers, TCA pilots get more training on the ground and in the air than most airlines provide. Knowledge and skills are checked regularly and rigorously in actual flight and in million-dollar electronic flight simulators. In 1961 alone, TCA spent over \$3 million training its 1,500 pilots and flight attendants.
- No airline in the world has better equipment. TCA is the first international airline to operate an all-turbine fleet: 80 superb jet and turbo-prop aircraft, powered exclusively by Rolls-Royce—the name synonymous with engine dependability. Ground equipment, too, is the finest and most modern available. On the ramp at a major airport, TCA will use as many as 135 self-mobile servicing units, costing up to \$40,000 each.

WHERE DOES AIRLINE DEPENDABILITY BEGIN?

- No airline in the world has better maintenance. At TCA's five maintenance bases, 3,500 highly skilled people use \$43 million worth of modern facilities and devices to ensure that TCA aircraft are kept as sound and dependable as science and care can make them. TCA's inspection and maintenance standards are far above those required by government regulation.
 - No airline in the world takes more safety precautions. The most advanced aids to safe flight are aboard every TCA aircraft. A DC-8 jet, for example, carries about \$100,000 worth of special instruments and equipment to minimize navigation and weather problems. TCA's manual of flight operations directs pilots to make safety their number one consideration at all times.
 - TCA's record of on-time arrivals is among the best of all North American airlines. A new performance peak was reached in April, when 94% of TCA's 11,415 flights arrived right on schedule or within 15 minutes. This record has been improving steadily and will continue to improve as the uncertainties of weather are further overcome by new scientific developments.
- From its earliest beginnings, TCA has looked on dependability as the most important single characteristic of a good airline. It is one of the principal reasons why Canadians have confidence in TCA, and internationally experienced travellers recognize it as one of the world's great airlines.
