

## Rescue From RHO Cassiopeiae

1. Frank Luxon is a 21 year old student studying education at the University of Prince Edward Island. Frank loves to be with children and hopes to be a school teacher when he graduates from university. During the summer of 1989 he got a job working at a Dairy Bar in North Rustico. The Dairy Bar is very busy most nights except for Sunday's. On the last Sunday he worked at the Dairy Bar, before he went back to school, something strange happened. Frank was just sitting behind the counter, no customers were around, when he heard something or someone trying to say something to him. "Frank, Frank can you hear me," this voice said? Frank got up and looked around, but saw no one. He knew someone was trying to talk to him, he got out of the Dairy Bar and looked around, but the place was empty. "Frank we're not here, we are contacting you telepathically from the space craft orbiting your earth," the voice said. Frank froze when he heard that. He thought that he must be going crazy, but that voice sounded so real, and so serious. "Frank, we are intelligent beings from the star your Astronomers call Rho Cassiopeiae. We are here to aid in the restructuring of your troubled earth," said the voice. "You mean you're extraterrestrials in a U.F.O.?", Frank replied. "Yes Frank, you can think of us that way," said the voice. Frank thought for a moment about this voice. It seemed so soft and warm and yet did not seem distinctly female or male. Frank then asked, "What do you want to talk to me for?" There was a short pause before a reply from this being came. "Frank, I will introduce myself as Maya, you were wondering just a moment ago if I was female or male." "I am male." "As I just said your planet is in a dismal state, many of your problems are very complex due to the dynamic social structures and cultural differences that exist." "Many of your more prosperous nations are, and have been, producing very destructive devices as well as machinery and crafts for inter-planetary warfare." "Poverty is at an incredibly high level in all areas of your planet." "The benefits of technological advances are not shared among all people of your earth". "The sharing of new technologies would help reduce hardships in poor nations."

2. "Your earth inhabitants mass produce by means of manufacturing, and travel in vehicles which have internal combustion engines, fueled by fossil fuels." "This results in a reduction in your planet's atmos-

pheric planetary shields." "Atomic explosions are experimentally performed underground, and these explosions send immense shock waves to the core of your planet, which causes internal planetary upheavals causing the more recent changes in your planet's atmospheric weather patterns." "And finally the people of your planet must learn how to replenish its water supply." "Your planet has a natural water replenishing process, however, it has been subjected to larger amounts of used water than it can work with the end result will be a severe water shortage on your planet." "You see, Frank, we are here to help your planet on a social level and on a physical planetary level," Maya concluded. Frank was amazed and admired the intelligence and compassion that flowed from the words Maya spoke. The feeling now was warm and safe, as opposed to scared and confused as before. Frank decided to ask, "If you're orbiting earth, how come your ship is not caught on NASA radars or something?" Maya replied, "Your planet's radar systems do have the capability of detecting us orbiting your earth, this is why we have attached our ship to one of the final stage solid booster rockets from the Apollo II mission." "This rocket detached during its mission outside the planet's atmosphere and got caught in an orbit." "Even though we are technically caught on your radar systems, we are misidentified as old space debris." Frank was satisfied with that answer, but he had to ask, "Why are you coming to me as a contact, there are probably politicians, scientists and educators that could be more beneficial in your restructuring program for earth." Maya answered the question, "Frank, first of all, you will be an educator and the information we will channel to you will become part of your teaching of young children." "Other people in your field will have the benefit of our information for the same reason." "As far as your scientific minds are concerned, only some will actually use our technological abilities for peaceful and harmonious means, politicians are for the most part mostly for self gain and power over your planet's masses."

3 "Only some are pure enough in the heart to work solely for the love and the good of the human race, we would, however, like to stress that you do not explain to your future pupils where you got such information." "This is suggested for your protection, this, of course, you understand." "Your future pupils will listen to you and to the information that you will give them, they will learn more about their hearts and their
