

20-Bed Modern Hospital To Be Erected At O'Leary

It was announced yesterday by the provincial directors that a modern 20-bed hospital, to be known as the O'Leary Hospital, will be constructed at O'Leary as soon as the weather conditions permit in the spring. Plans and grants have been approved by Provincial and Federal authorities and negotiations are

underway to acquire a suitable location. The decision to build a hospital in O'Leary to serve the village and the surrounding area covering 35 school districts and about five thousand people was taken at a well attended meeting last April 22nd in the O'Leary public hall.

Western Guardian

OIL DRUMS, sewing machine parts, boots and skates. The Trading Post, Summerside.

COME TO Kinkora Wednesday night, bingo, liberal cash prizes and jackpot.

COMPLETE flash camera outfit as low as \$9.95. The Read Studio and Camera Shop.

All cattle breeders in Lots 4 to 9 inclusive and the West Devon area, are invited to attend a meeting in the O'LEARY HALL, Wednesday, December 7th at 8 p.m.

The purpose is to establish an Artificial Insemination Club.

S'side Fire Department Holds Monthly Meeting

The regular monthly meeting of the Summerside Fire Department was held last evening with Fire Chief Abdon Arsenault presiding. Routine business regarding the operation of the department was given considerable discussion and the matter of the present alarm system in the town of Summerside was again reviewed. It was decided by a number of speakers that the present system leaves much to be desired and that an improved system is very much needed in the town. As an example of the unreliability of system now in use various speakers called the attention of the meeting to the recent fire which broke out while the electric power was disrupted due to a storm and the siren did not sound at all. Chief Abdon Arsenault agreed that the matter should and would be taken up with the fire committee of the Town Council.

Attlee Urges End To Atom Bomb Tests

LONDON (Reuters) — Labor party leader Clement Attlee Thursday night urged the British government to try to get agreement with the United States and Russia to stop further experimental hydrogen bomb explosions. Attlee put forward the plan in a motion in the House of Commons after a meeting of the Labor parliamentary party. The motion was worded in such a way that it was believed it would be hard for any member of either the Labor or ruling Conservative parties to vote against it. The motion asks the House to "welcome an approach by the government to the governments of the United States and the U. S. S. R. with a view to concluding an agreement for the cessation of further experimental explosions of hydrogen bomb."

Cleanliness Is The Price Of Safety In Atom Work

By KEN METHERAL
Canadian Press Staff Writer
SEASCALE, England (CP) — Cleanliness is almost a fetish with the men who work in the exciting, science-fiction atmosphere of nuclear laboratories. A-bomb test sites and atomic power plants. For men in daily contact with the deadly radioactive emanations common to nuclear proving grounds, cleanliness may mean survival itself. And the dirty hands and clothing of an untidy workman can render impotent the mighty potential of an atomic power plant. Scientists at Britain's big Calder Hall atomic power station near Seascale in West Cumberland say elaborate precautions are necessary to ensure that not a single speck of dust penetrates the heart of the nuclear reactor, firebox of the plant. Before workmen begin the final assembly of the reactor core, all working areas near the core are sealed. The areas are vacuumed and cleaned to a degree of spotlessness that would make even a meticulous housewife envious.

mighty important to scientists who work in places like Calder Hall or Canada's Chalk River plant. And it is equally important to our soldiers, sailors and airmen training to fight in the atomic age. Maj. R. E. (Rod) MacDonald, head of the Canadian Army's radiation detection unit in Kingston, Ont., puts cleanliness at the top of his list of "musts" for unit members.

CMA Says No Monopoly From Patent Laws

OTTAWA (CP) — The Canadian Manufacturers' Association said Thursday there is no evidence that Canada's patent laws have been used to any extent to establish corporate combine monopolies in industry. In an 11-page brief to the Isley royal commission the CMA disagreed with many points made recently before the commission by two Canadian newspapers. It said the newspapers painted a picture of monopolistic abuse of patents which "bears no relation to the facts." In fact, said the CMA, sponsorship of the previous submissions by the Regina Leader-Post and the Saskatoon Star-Phoenix "with all the publicity before the presentation and at the hearing before your commission suggests strongly in the association's opinion, that the presentation is more a publicity stunt than a serious submission on patent law."

Good Response At Blood Donor Clinics In S'side

The R.C.A.F. Station with F.L. (rev.) E.H. Christmas as chairman of a co-ordinating committee, oversubscribed its objective of 150 by registering 194 donors at the first of this week's Red Cross blood donor clinics yesterday morning. Members of the R.C.A.F. Station provided excellent assistance to the mobile team from Halifax. At the afternoon and evening clinics held at St. Mary Hall, 315 donors registered and stacked up a total of 513 on the Island's overall objective of 2,000. Much of the credit for the outstanding success of the Summerside clinic goes to the Canadian Legion under the leadership of Dr. H. E. Clark who canvassed business firms and organizations. They met with splendid co-operation from firms who gave employees time off during the afternoon to attend the clinic. The fact that 33 1-3 of those who attended the clinic were new donors was very encouraging. 213 of the donors were from the town of Summerside and the 69 others came from 23 of the surrounding districts. The ladies of the Summerside Red Cross branch headed by Miss Gladys Holman provided the volunteer assistants for the clinic and were assisted by members of the Summerside High School Red Cross members, Canadian Legion men and several men from the electric light plant staff. If the record established by the R.C.A.F. Station and Summerside can be maintained at the clinics to be held today in Craignap and North Rustico and at Charlottetown on Wednesday and Thursday the Province will be assured of a sufficient supply of blood to repay its debt of 500 and establish a credit for the next six months.

NOT EMOTIONAL PROBLEM

The Attlee move came after Prime Minister Sir Anthony Eden told the House during the afternoon that the question of controlling explosions is "not a matter of emotion but a technical problem of very great difficulty." Eden's statement was in effect rejection of a motion by Labor MP Arthur Henderson, who had suggested stopping experiments pending a United Nations report on the effects of radiation. Eden said the ban on all nuclear explosions raised intricate problems of supervision and control. "So far they have not been agreed upon internationally," he said. He added: "I wish very much they could be. Until they can be agreed upon, there does not seem to me there is any individual action that can be taken."

Program On Man-Made Fibres Introduced To CAC

MONTREAL, Man-made fibres are carefully developed textile materials, each with its own properties and designed for a specific purpose, but due to their revolutionary effect they have become mistakenly known as "miracle fibres". J.P.C. Gauthier, general manager, Canadian Fabrics Foundation, said here. The speaker pointed out that the man-made fibre and fabric industries are all-Canadian in nature. "The basic raw materials for man-made fibres — woodpulp, coal, petroleum, etc., — are found in abundance in Canada. With the growth of this industry, Canada is daily becoming more self-sufficient in man-made fibres and textile products." "The man-made fibre and fabric industries make a valuable contribution to the economic well-being of the country as a whole and to some 27,000 Canadians, in many centres, particularly in this province, who make man-made fibres and process them into yarns, fabrics and other textile products." Mr. Gauthier specifically described the four man-made fibres — viscose, acetate, nylon and terylene, that are made in Canada at present, noting that they are "properly fibres. He added that two other fibres, orlon and arnel, now in use here, and whose value has been established, are being considered for manufacture in Canada. "Some properties," he said, "are common to all man-made fibres to a greater or lesser degree. All wash and dry clean quite easily. They have pleat retention and are resistant to wrinkles and all are mothproof and resist mildew and mold. However these properties vary in degree from fibre to fibre and the fine choice of a fibre for a specific end-use depends on the qualities of that fibre that best fulfill the performance characteristics of the end-use." Following Mr. Gauthier's address

Program On Man-Made Fibres Introduced To CAC

had been closed to natural fibres. A CHALLENGE "There has also been some talk of the challenge that man-made fibres present to the textile industry. It has been in the nature of a challenge to accept and use a set of valuable new tools so that a better product can be produced. The results have been the creation of a number of textile products more exactly suited to specific end-uses and more satisfied customers." The speaker pointed out that the man-made fibre and fabric industries are all-Canadian in nature. "The basic raw materials for man-made fibres — woodpulp, coal, petroleum, etc., — are found in abundance in Canada. With the growth of this industry, Canada is daily becoming more self-sufficient in man-made fibres and textile products." VALUABLE CONTRIBUTION "The man-made fibre and fabric industries make a valuable contribution to the economic well-being of the country as a whole and to some 27,000 Canadians, in many centres, particularly in this province, who make man-made fibres and process them into yarns, fabrics and other textile products." Mr. Gauthier specifically described the four man-made fibres — viscose, acetate, nylon and terylene, that are made in Canada at present, noting that they are "properly fibres. He added that two other fibres, orlon and arnel, now in use here, and whose value has been established, are being considered for manufacture in Canada. "Some properties," he said, "are common to all man-made fibres to a greater or lesser degree. All wash and dry clean quite easily. FEARED MONOPOLES

The submission of the newspapers was made Nov. 21-22 before the royal commission studying Canada's patent, copyright and like laws which is headed by Chief Justice J. L. Isley of Nova Scotia. It urged sweeping patent law changes to prevent monopolistic control of industry and trade. There was also disagreement on some points from the Patent Institute of Canada, an association of patent lawyers, and from the Chemical Institute of Canada. The Chemical Institute said the present patent system has served Canada well and should not be tampered with on the basis of "unsubstantiated allegations."

School Damaged By Vandals

LONDON, Ont., CP—Police hunted Friday for the vandals who created such havoc in a rampage through suburban Byron public school that 350 students had to be sent home until repairs are made. Police said thieves broke into the school, six stores and a bowling alley Thursday night, made off with \$600 worth of electrical appliances and \$200 worth of watches and a quantity of cigars and tobacco. In addition they left a trail of destruction amounting to more than \$1,000. In the school, inkwells were spilled over teachers' desks, an expensive record player and several recordings were smashed and the phone was ripped from the wall in the principal's office. Principal Fred Staffan said he sent the pupils home because there was so much damage "it would have been impossible to hold classes and restore order at the same time."

HONEY OUTPUT UP

OTTAWA (CP) — Canada's 1955 honey crop was 24 per cent larger than last year but 26 per cent smaller than the 1944-53 average, the bureau of statistics reported Monday. The 1955 crop was estimated at 24,600,000 pounds, 4,800,000 larger than the 1954 total but 8,700,000 smaller than the 10-year average. All provinces except British Columbia showed production per colony was either above or about the same as last year.

NEGRO IS JAILED

MONTGOMERY Ala. (AP)—A Negro woman was fined \$10 and costs in police court Monday for violating a city ordinance requiring racial segregation on city buses. Rosa Parks, seamstress at a downtown store, immediately served notice of appeal to circuit court. The woman was taken off a bus and jailed last Thursday night after refusing to leave a section reserved for white passengers.

DEVELOP BEST POSSIBLE

"Having access to the research made in other countries, and having themselves tested and experimented on the results of such research, in addition to their own research, man-made fibre and fabric producers are in a position to develop the best possible applications for the Canadian market," Mr. Gauthier said. "Much of the research and development work being done today in the Canadian textile industry is a development of uses of textile products. As a matter of fact, the advent of man-made fibres has opened new fields that heretofore
