To furnish as they should without the right material to work with. The dairy cow must be of a certain character, if dairying is to be even though all the other conditions are right, and the mutton lamb will not produce mutton profitable form unless it has nutron-producing capabilities in a high degree. These qualities are the result of breeding and management, and they can always be secured in a few generations, when the breeding and management are of the right character. Know your man who is willing to try and produce dry products and meat with annual uneasiness, and I will show you a man who is willing to dig with his spade when he might just as well have a sharp one. The man who works his spade will have him in the race every time, and the use of such muscle-muscular power.

The great advantage of live stock keeping apart from the direct revenues which accrue from it is found in the influence which it exerts on the maintenance of fertility, and, after all, this is the keynote of successful farming. Conditions may be such that even fertile soils may not be cultivated with a profit until it is renovated to some extent at least. Hence the great importance of maintaining fertility at any cost.

But no system of farming is likely to be so successful as it can be made, without the best kind of man who is brought to bear upon it. This implies that the most successful farmers, other things being equal, will be those who are best educated in all that pertains to the calling. There are a few men who are engaged in this work in your midst. I am glad to know that my friend and former pupil, Professor Harcourt, is in your midst, and that he is doing a good work, at least, rumor says so, and am quite sure from my previous knowledge of him that this is one of the rumors that is true. Teachers of agriculture, like him, are, or ought to be, good men. They bring good things with them; therefore, they should always be made welcome. This may not always apply to professors of Animal Husbandry. It is thought by many that education will tend to draw young men away from the farm. My contention is that it will tend to moor them to the farm, if it is of the right kind. If the tendency is to take them away from the farm it is not of the right sort. This view finds confirmation in the fact that during recent years nearly all the young men who have graduated at the Ontario Agricultural College at Guelph, have gone to farming on the completion of their course, that is to say, when they go from the college to the farm. This is true probably of 90 per cent. of the whole number.

It is peculiarly adapted to a dairy farm. It is cheering to notice that the people are recognizing that and are acting upon it. Those gentlemen who are laboring in the province to extend their dairy interest are the benefactors of the people, however much of self may be present in their motions. My friend, Prof. Robertson, deserves the "brother of the Island" for pressing that matter upon the attention of our people. It is gratifying indeed to know that not less than 11 cheese factories are at work in the Island. There is room for very many more, and it is to be hoped that the work will go on until every township in the Island will have one or more. Take good care of Mr. Dillon, he is doing good work, and don't let him take any of his pay in hostile criticisms, when not doing it. It is peculiarly fitting that the Maritime attention should be given to dairying, for the reason, first, that the natural foods for dairy stock can be grown abundantly and in fair form. These are such as a variety of grasses, various grains, as oats, peas and barley, and corn for ensilage. For the reason, second, that the produce can be marketed in the concrete form. The cost of marketing cheese is not much, indeed compared with that of marketing the foods from which it is produced. And for the reason, third, that the drain on soil from a variety of grasses, various grains, as oats, peas and barley, and corn for ensilage. For the reason, second, that the produce can be marketed in the concrete form. The cost of marketing cheese is not much, indeed compared with that of marketing the foods from which it is produced. And for the reason, third, that the drain on soil from a variety of grasses, various grains, as oats, peas and barley, and corn for ensilage.

My friend, Prof. Robertson, deserves the "brother of the Island" for pressing that matter upon the attention of our people. It is gratifying indeed to know that not less than 11 cheese factories are at work in the Island. There is room for very many more, and it is to be hoped that the work will go on until every township in the Island will have one or more. Take good care of Mr. Dillon, he is doing good work, and don't let him take any of his pay in hostile criticisms, when not doing it. It is peculiarly fitting that the Maritime attention should be given to dairying, for the reason, first, that the natural foods for dairy stock can be grown abundantly and in fair form. These are such as a variety of grasses, various grains, as oats, peas and barley, and corn for ensilage. For the reason, second, that the produce can be marketed in the concrete form. The cost of marketing cheese is not much, indeed compared with that of marketing the foods from which it is produced. And for the reason, third, that the drain on soil from a variety of grasses, various grains, as oats, peas and barley, and corn for ensilage.

The Island is peculiarly adapted to a dairy farm. It is cheering to notice that the people are recognizing that and are acting upon it. Those gentlemen who are laboring in the province to extend their dairy interest are the benefactors of the people, however much of self may be present in their motions. My friend, Prof. Robertson, deserves the "brother of the Island" for pressing that matter upon the attention of our people.
