Farm Prices & Market Report

Following are excerpts from the weekly report of the Provincial Department of Agriculture, prepared by Mr. S. C. Wright:

The feed situation has not changed materially during the past week any more than there is an embargo on shipments of feeding grain at the present time. That means that if carlots of feed are purchased a premium must be paid for early delivery. Quotations on No. 1 feed oats for late March or early April delivery are \$2.03, bulk, carlot, delivered, and for No. 1 feed barley \$2.68. Bran and shorts have eased a little, and are now quoted at \$5.74 per ton. Protein feeds are still in short supply, with alfalfa being retailed at \$5.10 per hundred pounds.

Eggs and Poultry
The egg market has developed a firm undertone from last report. Demand is keen and all surplus stocks are moving out readily to other Atlantic Provinces. Production is steadily increasing. Quality generally is fair to good. Paying prices have advanced on all grades and dealers are now quoting for ungraded eggs delivered: AL 40, AM 37, AS 28, B 28, C 20; and for the graded pack delivered: AL 48, AM 45, AS 35, B 25, C 16; and are quoting retailers, loose: AL 51, AM 48, AS 38, B 38, C 29. In the majority of cases retailers as yet have not adjusted their prices with advance and are retailing at AL 52-55, AM 49-52, B 42-45. We must expect an upward adjustment in line with advancing prices.

Rural Stations:
O'Leary: AL 38, AM 33, AS 27, B 27, C 18.
Summerside: AL 40, AM 37, AS 27, B 27, C 16.
Antigonish: AL 38, AM 34, B 25, C 15.

Sydney Market as at February 16th, 1952: Dealers paying loose: AL 56; dealers selling loose: AL 56; four cents up in cartons. Retail in cartons: AL 56-69; AM 56-62.

Halifax Market as at February 17th, 1952: To producers: AL 44, AM 40, AS 37, B 29, C 25. To retailers: AL 59, AM 56, AS 50, B 46. To consumers in cartons: AL 58-61, AM 57. Spot price: AL 49, AM 45, AS 42, B 34, C 25.

Local egg receipts are now insufficient to meet the demand which continues good, and dealers are supplementing stocks with Ontario and Prince Edward Island eggs. The general tone of the market remains firm and a further increase in paying prices for A grades is reported. The quality of arrivals is fair to good.

Dairying
The price of butter on the Maritime markets has not changed from that of a week ago. The shortage of butter which was created on the Nova Scotia markets when the Dairy Products Board stopped the sale of butter caused that province to advance its price two cents according to the official circular, and the price is still quoted at 66¢ f.o.b. Halifax, with local jobbing at 68¢.

The temporary shortage of butter created by the Dairy Products Board's stoppage of sales resulted in higher prices in some markets also in New Brunswick, but now that butter is again being distributed by the Board prices should become more uniform. Creamery operators recommended that in spite of higher prices in some markets it would be in the best interests of all concerned to continue last week's quotations on New Brunswick creamery prints, which are as follows: Creameries to wholesalers, one and two pound prints—64¢; wholesalers to retail stores, one and two pound prints—66¢.

The price has not changed in this Prince. Local jobbing is still quoted at 68¢ delivered, the wholesale price being that of either New Brunswick or Nova Scotia less freight and other charges, depending on the province to which the butter is sold.

According to figures just received from the Dominion Bureau of Statistics they should be sufficient butter to meet consumption this year provided the storage stocks are well distributed and there is a continuation of the present marked increase in production. The manufacture of butter in Canada for the month of January was 1,130,000 million pounds, which is 21 per cent of an increase over last year, and the total stocks in Canada on February 1st were 44 million pounds compared with 36 million pounds on the same date in 1952.

Livestock
The following figures show the number of hogs delivered to packing plants during the month of January in 1952, compared with 1951, and the percentage change:

	1952	1951	Change
Maritimes	18,506	9,810	-46.9
Quebec	113,235	54,878	-51.5
Ontario	223,100	158,192	-29.1
Manitoba	47,551	35,062	-26.3
Saskatchewan	57,748	53,960	-6.6
Alberta	115,826	135,946	+17.4
Brit. Colum.	2,647	2,860	+ 8.0

This shows a general decrease of 22.1% for all Canada in hog shipments during the month of January.

Market Prices
On the Montreal market trading was reported slow on steers with other grades moving fairly well. Good steers were quoted at 21.00 to 22.00, with a few Choice at 23.00. Good cows were 14.00 to 15.00. Potatoes
The potato market is in a rather chaotic condition at the present time, due to the fact that the State of Maine, which has quite a surplus of potatoes still on hand, has started to ship potatoes into the Upper Canadian markets at a price much below those set by both the New Brunswick Potato Marketing Board and the Prince Edward Island Potato Marketing Board. Reports have been received to the effect that the New Brunswick Board, in order to meet the Maine competition, have had to abolish their recent floor prices. This has had an unfavourable reaction on the market situation here, so much so that prices being paid by the dealers are below the minimum prices set by the Potato Board on the 10th instant. Whether the prices being paid at the present time can be maintained is a question which the next few days will perhaps determine. The market is being investigated at the other end, in both Montreal and Toronto, and we can expect some clarification of the situation within the next few days.

Meanwhile considerable stock is moving from the Province. Some 149 cars were loaded for the week ending February 17th, bringing the total to 365 cars loaded as of that date, for the month of February. This is some 39 cars more than were loaded in all of February last year.

The latest statistics on storage holdings in Canada were some 3,000,000 bushels lower than the figures given for January 1st. As of February 1st total storage holdings in Canada amounted to 1,940,000 bushels as compared with 9,395,000 bushels a year ago. This increase, however, is more than offset by the importations which were shipped into Canada last year from January 1st to May 31st of well over two and one-half million bushels. This would seem to indicate that there actually are not more potatoes available for consumption in Canada than was the case a year ago. However, if our markets have to absorb quantities which are brought in from the States it will of course have the effect of reducing prices accordingly.

It must be remembered also that Canada imposes no duty whatsoever on United States potatoes coming in, whereas we must pay 37 1/2¢ per 100 lbs. for all stock which we export to them and that on a set quota basis. Beyond the quotas the duty doubles to 75¢ per 100 lbs. The potato situation in the United States is little better, if any, than prevails in Canada. In spite of this, however, shipments are fairly heavy and the consumers are eating a lot of potatoes. Some seed is moving from various seed producing centers and the demand for that commodity should pick up rapidly, particularly during the month of March which is usually the heaviest seed shipping month of the season.

Indications for planting in United States would appear to be that an increase is contemplated but whether this is sound policy is a debatable question. United States growers are being advised to "stop for the red light" pointing to the fact that the 1952 bonanza is not likely to happen again for a long time, but that if growers will use moderation in planting they may reasonably expect to enjoy nice prices for quite a while.
