WINNIPEG STRENGTHENED

(Canadian Press) WINNIPEG, June 11—Addition of Pete Somers of All-American ranking to their quarterback division has materially strengthened Winnipeg, Dominion rugby title-holders, for their conference season opener here against Calgary Bronks, Sept. 5. Former Minnesota quarterback, Somers assisted Coach Bob Fritz in drilling Pegs for their

western and Canadian finals last season. He is considered a passer and ball carrier of exceptional ability.

PEE WEE SOFTBALLERS

(Canadian Press) CALGARY, June 11—Encouraged by the success of its Pee-Wee hockey professionals, a seven-team Pee-Wee softball schedule will be played here this summer. The loop is fostered by the City-wide Softball League with an age limit of 16. The youngsters are required to fill out the same entry form as players in the senior section of the "A" league.

FLOODLIGHT SOCCER

(Canadian Press) VANCOUVER, June 11—Soccer will receive its first baptism under the floodlights on the Pacific coast this season. Senior games will be played under artificial lights at Jones Park.

British Women Are The Best Dressed

That British women are the best-dressed, but only by grace of taste is Norman Hartnell's view. Americans have all the advantages over us; better figures—they are longer limbed (from thigh to ankle are the mannequin's most important measurements). They are more receptive to new ideas, have often more money to spend on cheaper clothes (the American system of mass-production in women's clothing is still ahead of ours). Yet, he says, British women win. Our taste is sounder. We are less inclined to fall for freak fashions. We have at natural dignity. . . . Frenchwomen he dismissed grandly. . . . "Frenchwomen don't dress; they wear a bit of black, some good diamonds, and too much make-up. . . ."

DRESS BUDGET

Next question was—how should one apportion a dress budget? . . . His what-should-you-have-to-spend, Hartnell declares, should be put into evening clothes. He reasons that most important meetings happen in the evening. The other half to be spread between day clothes (quarter), accessories and shoes (one-eighth), and stockings and underclothes (one-eighth). To look the best for your money, stick to one color theme in day clothes. Black, nigger-brown or navy blue. Your wardrobe should include one well-cut tweed suit, not exaggerated in style or it will date, and a plain dress with a three-quarter length coat. With the last, choose colorful, good-looking accessories. . . . Hartnell favors flesh pinks, mustard yellow or turquoise blue for these. About furs, he is curt. If you can't afford good ones, forget them.

MEANNESS

Most prevalent fault in dressing, he finds, is meanness. . . . On a good dress we wear a cheap belt, and cheap accessories. A good belt can be the making of an inexpensive frock, but never the other way about. Then shoes, they are often overlooked, but important. You can't look well-turned out on heels that turn under or in flinck, fancy shoes. Unless you can pay big prices, it is safer to keep to plain court styles, untrimmed. Hair: Hartnell stresses that hair styling is as important as anything you wear. Unsuitably dressed hair can spoil a complete outfit.

OLDER WOMEN

On the question of clothes for the older woman, Hartnell is decided. She should not "attempt to follow fashion." Her clothes must be designed for her expressly, individually. Her danger is in trying to look young, it can add ten years to her looks. When she finds a style that suits her, she should stick to it. He considers that men are, generally, better judges of clothes than we are (not the number of male designers). Their decisions are not clouded by how much it cost, who made it, what the girl-at-the-next-table wore last Thursday. His last bit of advice was to emphasize care of clothes, hair and hands. It is not the money, but the time you spend on these matters.

Canadian Garden Service

Much of the real interest in gardening lies in trying something new. Of course it is not advisable to make over the whole garden each spring, nor should one abandon completely all those old favorites which have come well in the past, but without sacrificing entirely new each season, some interest will be lost. In a special part of every seed catalogue will be listed the very latest creations in both flowers and vegetables. Certain flowers which were always double before now appear in a single type, or perhaps a

Noticeably taller than when his father's assassination put him on the throne, and prematurely serious due to the responsibility of his position, 12 year old King Peter of Yugoslavia is pictured as members of the Household Cavalry saw him at his first military review in Belgrade. He wears the uniform of the gymnastic association.

Blight Disease of Celery

Each year a large part of the celery crop produced in Canada is destroyed by the blight disease, otherwise known as late blight. These losses would be materially reduced if the celery growers would practice the control measures which have been recommended by the Division of Botany, Dominion Experimental Farms.

This disease may occur in the seed-bed, but seldom does very much harm until the cool rainy days of late summer and early fall when it frequently becomes severe. The typical symptoms may be detected on either surface of the leaf as rather small roundish and yellowish spots which later become irregular in outline and black or dark brown in the centre. When these areas become very numerous they unite to form blotches, giving the entire plant a darkened appearance. Spots on the stems are similar to those on the leaves, except that they are inclined to be elongated rather than circular. In each diseased area will be found many tiny black dots, which are the fruiting bodies of the parasite. The millions of spores oozing from these bodies or pycnidia are spread by insects and rain to start another infection. The casual fungus lives through the winter on the seed and in the old diseased plants left in the heap. If celery thus diseased is stored after harvest asprophytic organisms will cause a very destructive decay of the stalks.

The more reliable control measures against celery blight are as follows: 1. Spray the plants with Bordeaux mixture or dust with copper-lime dust, using the proportions of 15-85. The first two applications should be made before the plants are removed from the seed-bed, starting when they are about an inch in high and repeating a few

RHEUMATISM

Rheumatism is often caused by uric acid in the blood. Uric acid is a waste product extracted by the kidneys. If kidneys fail, and uric acid, it changes to uric acid which in minute crystals lodges in joints or between muscles causing excruciating pains. Plans to prevent rheumatism by keeping your kidneys in good condition. Take regularly Dodd's Kidney Pills — for half a century the favorite kidney remedy. 101

new distinct color has been added. Giants have been dwarfed, like the new tiny Zinnias, or very much increased in height, added to something a few years ago could only be secured in midsize size. Practically all the leading flowers may now be secured in both doubles and singles and some of the latter, particularly in the Asters are very desirable. In vegetables too there are innovations each year, some of which are almost bound to find staunch supporters.

Yellow Flowers

Yellow is a cheerful color, and is a favorite with many amateur growers. A yellow border with some blue plantings to go with the pale yellows, scarlets and clear reds for the brilliant yellows, and a little lavender for the orange yellows, gives a strip of brilliance and beauty.

The dwarf sunflowers are good for the tall portions of the border. They are dwarf only as compared with their tall varieties, which may grow from 8 to 10 feet. The dwarfs reach only 3 feet and have delicate flowers and foliage compared with the old-fashioned barnyard sunflower.

Along with the sunflowers for tall yellows is the bush California poppy. The calliopsis, annual coropsis, with golden flowers sown with crimson is indispensable in the yellow borders, and the marigolds, both tall and dwarf with their cousins, the calendula or pot marigold, will furnish beautiful cutting material. The ordinary California poppies furnish low growing brilliant masses of yellow.

Annual chrysanthemums give softer yellows. In a burnt orange of glistening texture unknown in other annuals are the Africa daisies.

There are other shades from white to creamy yellow as well as brilliant orange, all excellent for cutting.

The annual blanket flowers, or galliardias, will furnish the touch of red along with yellow needed for the border, and they too are fine cutting material.

Cheap Perennials

Most perennials may be grown from seed. Early in June is the best time to get started. Most of these should be started in a special nursery bed, except, perhaps such things as Oriental poppies which are rather difficult to transplant and should be sown where wanted permanently. Seed should be secured from a reliable firm. With perennials more than other flowers seed is very important as there is liable to be a good deal of mixing and old seed with most of the flowers is absolutely no good. Prepare a fine bed in some portion of the garden where there is good drainage and preferably a little shade in the middle of the day. The seed is sown in rows about three or four inches apart. Keep the ground free of weeds, well cultivated, and until growth starts, water with a fine spray every evening. Thin out plants and provide a light protection of leaves or straw the first winter. Next spring transplant to permanent quarters. Canadian Seed Trade Association

U.S. Engineers To Deepen Cod Canal

(A. P. By Guardian's Special Wire) BOSTON, June 11.—The United States Army Engineer's office announced tonight the award of contracts totalling nearly \$4,000,000 to three New York dredging companies to deepen and widen Cape Cod Canal. The project, which will give the canal a depth of 32 feet and a width of 500 feet completed in two years, will open the waterway to large coastal passenger and freight vessels that now must travel 70 extra miles around the Cape. Army engineers said the work would start by July 1.
