If a single one of them is lost owing to some treatment, the vacant place...

Also Political
The United States agricultural surplus disposal program, which has been severely criticized by the governments of Canada, Australia, New Zealand, Argentina and other major exporting countries, is not altogether a matter of economics. The pressures of international politics are also involved.

This aspect of the problem was stressed at the recent meeting of the U. N. Food and Agricultural Organization in Rome. The program was praised as a commendable effort. The trade, understandably, came from those countries which need wheat and other farm products but do not have the money to pay for them.

It can thus be seen that the United States authorities have a difficult row to hoe in this particular field of trade. However much they may want to satisfy the demands of Canada and the other countries which are complaining about unfair competition in world markets, they cannot afford to slight the governments of the have-not countries, especially India, the seeking and retaining of whose friendship is a main objective of United States policy in Asia, India, in the present state of world affairs, the Americans may well decide that a little Canadian irritation in matters of trade is to be preferred to India's dissatisfaction on the political front.

EDITORIAL NOTES
At least one Arab country has journeyed into the promises of Egypt's President Nasser. The worthy King Hussein of Jordan described his defence agreement with Egypt as "not worth the paper it is written on". Other governments in the region will probably soon come to the same conclusion to the betterment of conditions in the Middle East.

The executive secretary of the Canadian Library Association thinks that libraries on wings will be the next step in getting books to isolated areas of the north. It is less than thirty years since the first library was put into service. If the flying service does as much good as has been accomplished by the bookmobile it will be worth all it will cost.

Seeing The Atom
A German physicist at present working in the United States, has succeeded in rendering individual atoms visible. This means that the first time atoms scientists got an eye-old dream of fulfilling one ancient and a half after Dalton that the first vision of atoms as ultimate particles of matter. If it were still necessary, the atomic structure of matter has now finally been proved. Anybody can look at matter and see the atoms!

The problem has been solved by a novel kind of supermicroscope which supplies magnifications of over a million. The apparatus consists of a very thin metal wire drawn out into a tiny point and placed in an evacuated tube, with a fluorescent screen installed opposite at a distance of four inches. What happens is too complicated for description here, but pictures thrown on the screen show beautiful patterns composed of rows, circles, etc., of bright points. These points are single atoms. The image is sufficient to convey a complete picture of crystal structure.

It will now be possible to study the effects of metal-working directly on the crystal lattice in a microscope, and metal technology will find many answers to current problems. Unfortunately, only four metals are suitable for the new type of microscope, those being tungsten, molybdenum, tantalum and rhenium. The most important metal, iron, is unsuitable. However, lattice effects observed in the four metals after appropriate treatment are likely to resemble those occurring in the more practical metals, and technological conclusions may be drawn from the observations. The sober process ends on a note of optimism. "On every picture," it says, "about 10,000 atoms are seen."

Either way it will be fun!

OTTAWA REPORT

Removed Post For Mr. Pearson
By Patrick Nicholson
Special Correspondent
The Guardian

Ottawa: A persistent report has been circulating here to the effect that Hon. Lester B. Pearson will be offered a very important post at the United Nations. The job, chairman of a standing committee on world disarmament whose job would be first to negotiate a disarmament agreement and then to ensure that all nations observe that agreement.

MINISTER'S LOOK-ALIKE
This Hon. Michael Starr got a double: A Toronto newsworker reported that he was seen attending the reception at the Russian Embassy here, held to celebrate the 40th anniversary of the Russian revolution. But I saw our first Ukrainian Canadian Cabinet Minister sitting in his seat in Parliament the other day, and he was seen in his business as Minister of Labour at the time when perhaps the most important question was the application of war veterans allowances.

MOST NOTED BOOKIE
The most noted bookie in the new Parliament is the new Social Credit member from Okanagan-Boundary, Frank McLean. Three things win him this palm: his great height, his loud voice, and that whenever he speaks he is heard more of the time than any other member of the House.

ON PARLIAMENT HILL
Backbenchers' Week
By Heath Macquarrie, M.P.
Last week the House of Commons resumed the postponed debate on the address in reply to the Speech from the Throne. Members on all parts of the country were in the House, and it was a very close to their hearts - usually a member speaks a good deal of sense about the interests of his constituency. On the Conservative side, most speakers have spoken for a few minutes and many of us made our own contribution to the debate.

There is a great challenge to any member who rises for the first time to address the House of Commons. As one M.P. said years ago, a maiden speech is a man's first and only chance of making a name for himself. It offers a chance for a member to show his feeling of humility - an attitude which is in itself a good thing for the House and for the other members who listen have a chance to practice indulgence towards a maiden speaker, and especially among leaders of the opposition.

On Wednesday, at 5.45 the Speaker called upon the Honourable Member for Queens, who is the parliamentary custom, and I found myself on my feet ready to begin my maiden speech in the House of Commons. I have spoken for a number of years, and I have spoken in a number of different kinds of audiences in recent years. I was very much of the

Sore Throat A Danger Signal

By Herman N. Budreau, M. D.
A SORE throat may mean real trouble. So it is after you have had a sore throat for more than a few days. With children, a sore throat is a serious sign of rheumatic fever. In fact, most cases of rheumatic fever occur in children who have had a sore throat or perhaps scarlet fever.

SEEMS TO RECOVER
When a child has a sore throat for more than three days and appears to be getting better, it is important to see a doctor. The symptoms of rheumatic fever may develop within three weeks.

OTHER SYMPTOMS
A pale complexion, either a high or low fever, frequent attacks of vomiting, or a sore throat which is not getting better, are all signs of rheumatic fever. Without delay, summon your doctor if your youngster has any combination of these symptoms. They are particularly dangerous if your child has a sore throat which is not getting better, a pale complexion, or a high or low fever.

SCHOOL CHILDREN
A sore throat which is not getting better, a pale complexion, or a high or low fever, are all signs of rheumatic fever. Without delay, summon your doctor if your youngster has any combination of these symptoms. They are particularly dangerous if your child has a sore throat which is not getting better, a pale complexion, or a high or low fever.

ROUTE TO NEWFOUNDLAND
Sir: A few weeks ago I read in your valuable paper that the Board of Newfoundland were trying to load cars aboard the "Carson" but so far have not read that they were successful.

Now we are trying to get a canoe... between Tormentine and Borden. If we should succeed, Prince Edward Island would be the first to have a road to Newfoundland, by taking the two boats at Borden and putting them on a run between Georgetown and Port aux Basques.

The distance between Moncton and North Sydney is three hundred and eighty miles, and between Moncton and Port aux Basques one hundred miles - a total distance of four hundred and eighty miles. On the other hand the distance between Moncton and Georgetown is one hundred and seventy miles, and between Georgetown and Port aux Basques one hundred miles - a total distance of two hundred and seventy miles.

By making use of this natural advantage, we could save a great deal of money. It would be well to have a road to Newfoundland, by taking the two boats at Borden and putting them on a run between Georgetown and Port aux Basques.

Earl Riggs
P's are difficult. He may also find it difficult on later occasions to regain the friendship and goodwill of the Chamber.

PROVINCIAL PROBLEMS
The present session of Parliament has very large numbers of freshmen M.P.'s, and many of us have taken part in the Throne Speech debate. As a rule, a courteous and cooperative atmosphere prevails, and the members find the ordeal of a maiden speech less terrifying.

NOTES BY THE WAY

Job had patience, but he never had anything to say to his boss. He was going to London - Calgary Alberta.
A new aid to air safety is a device which enables the pilot to place his feet on a television screen. This is nearly as amazing as the ordinary TV set which is used to watch the game. The device was playing at the Biju 20 show - Winnipeg. Tring...
If the trend toward lower car roofs and higher tail fin continuers by 1961 the top of the fin will be the highest point on the car - Kitchener - Waterloo Record.

An apple for teacher is an old tradition, but the Timesboro had who brought a live thirty-inch rattlesnake for his science teacher may be a little more something - Ottawa Journal.

Environment has much to do with the size of halibut. In the country there are about 100 per head and are thus the largest consumers of chocolate in the world. It must be added that a horde of tourists helped to absorb this considerable mass of chocolate, equivalent to 100 of the customary 3 1/2 oz. size. So prospects for the men are now putting on the interior firm The Stewart Construction Company experts to have the work completed by Christmas.

OUR YESTERDAYS
From The Guardian Files
TWENTY-FIVE YEARS AGO
(1932-1957)
Hon. G. Sheehan, M.P., Minister of Agriculture for P.E.I., addressed over 100 people at the Royal Winter Fair, at Toronto last night. Hon. Mr. Sheehan pointed out that the island had carried off the bulk of prizes in the competitions including the grand champion and reserve champion in many classes.

THE AGE OLD STORY
The Lord Aveith them that are his. And, if every one of them nameth the name of Christ that day from inquiry.

SLOW DOWN AND LIVE
Driving upon the public highways is a privilege as well as a legal right. We owe it to ourselves and to the other driver to have our cars in good working condition, to drive at moderate speed, to observe all traffic rules and to DRIVE CAREFULLY.
