the ground, with settings of fine green, frilled ruff-like collars which never seem to mind the worst of weather conditions, they thrive under trees where few other plants can hold their own.

Muscari (Grape Hyacinths) grow wild near the Mediterranean from the Algeria to Asia Minor but only in America is seen commonly in America. It is a good blue and grows about six inches high, it also has a lovely white form, and they are splendid bulbs for the rock garden. Fritillaria (Guinea Hen Flower) are very early bulbs and I have had a few of them for many years, reddish brown and purple bell shaped flowers in curiously checkered shades, on stems twelve inches high.

Every Spring I look for a lovely mass of blue in an old garden, and I am never disappointed. A dear old lady planted them many years ago, and the few bulbs have become dozens making a beautiful corner, they are Scilla Hispanica or (wood Hyacinths) sometimes called Scotch Bluebells or Squills. There are many small inexpensive early bulbs suitable for sunny banks or rock gardens and it is fun to try a few new ones each year.

It and think it wrong. First, because she is my dead wife's sister. Second, because she is fourteen years older than I am. What do you think of it?

P. H. S.
ANSWER: I think it is a grand idea and have no doubt it would prove a most suitable and sensible match. At your age people are past the romantic time of life and they are wise to marry an old friend, who will fit into their lives far better than any stranger would. As for her being older than you, that does not count at your age.

DOROTHY DIX cannot reply personally to readers, but will answer problems of general interest through her column.
