Here's why SHERWIN-WILLIAMS HOUSE PAINT is your most economical buy!

It's SWP's extra high content of FILM-FORMING SOLIDS* that makes the difference!

What are FILM-FORMING SOLIDS? Film-Forming Solids represent the film or coating which remains on the surface after the paint dries. In the case of SWP House Paint, they equal 90% of the paint applied. In "low price" or inferior paint, their content is as low as 45%. This means SWP House Paint will cover twice as much surface per gallon as cheap paint. In addition, the user of cheap paint sacrifices such important characteristics as durability, gloss and color retention, and self-cleaning properties. Next time you paint, choose SWP quality House Paint for true economy.
