

In Far Northern Quebec Spadework Is Being Done

MONTEAL (CP) — In far northern Quebec, closer to the Arctic Circle than Toronto is a Montreal. The spadework is being done on a \$40,000,000 project which it is hoped will keep Canadian asbestos exports expanding in the 1970s.

The site is Putung, Eskimo for the "place where there are drill holes." It is 300 miles south of the Arctic Circle and

40 miles south of Deception Bay. And by sea only 500 miles farther to main European centres than in Montreal.

The developer of the project is Asbestos Corp. which plans to start producing there in 1970 at the rate of 100,000 tons of fibre a year.

The company, which has been mining for years in the Thérèse Mines area of Quebec's Eastern Townships, exports its products now to more than 60 countries.

It calls the new development Asbestos Hill. Hill's fibres are considered ideal for asbestos building products, a market which has been growing in Europe for some time and which now is looking up in other countries, including those in North America.

BUILD ROADS, CAMP

Some 300 men, about 40 of them Eskimos, are at work completing a construction camp at the port of Deception Bay, improving access roads, starting excavating at the Putung plant site, and building bunkhouses, warehouses and repair shops there.

Dredging for the dock in Deception Bay is planned for next year and construction of the dock itself the following year. Also scheduled for next year is construction of the permanent building at Putung. The town site and other parts of the project are to be completed by 1970.

Asbestos Corp. and other asbestos producers forecast an expanding market in the 1970s. The Russians have plans by expected to be met by their own housing program.

The asbestos at Putung, was discovered in 1957. Asbestos Corp. took over the property from Murray Mining in 1964.

The area is north of the tree-line and the permafrost goes down 300 feet or more. However, the permafrost and other problems connected with the climate and remoteness are not expected to be insurmountable. The isolation poses a problem of getting mining technicians to work far away from the cities, but this problem is to be alleviated by training Eskimos to handle equipment.

GARDENERS ARE KEEN

Japanese rock-gardeners will pay up to \$4,000 for an especially interesting piece of stone.

SHIPPING SEASON SHORT

The shipping distance to European centres is about 2,300 miles compared to the 1,800 to Montreal. The shipping season will last only three months a year on Deception Bay; on the south side of Hudson Strait, in theory 10-ocean ships with average carrying capacity would be able to move a whole year's output to markets in the three-month period.

SEA SLUG

A SNAIL WITHIN A SHELL FEEDS ON POISONOUS SEA FIRS

THE SEA FIRS POISONOUS STINGERS THROUGH THE SEA SLUG'S STOMACH AND REND AND COLLECT IN ITS SKIN WHERE THEY SERVE TO PROTECT THE SEA SLUG AGAINST ITS ENEMIES
