HONEST PRAISE.

Kickapoo Indian Sagwa Does Good Work in Maine.

Earliest Inroadment of Kickapoo Emigrants from the Extreme North Eastern Section of the United States, Merit Alone Could Have Made These Emigrants so Widely Known and Universally Admired by the People.

MONTPELLE, VERMONT, CO., Oct. 16, 1892.

I wish to tell you what your great medicine Kickapoo Indian Sagwa, has done for me and my family.

My wife was very sick and had been picking for a long time, and her old family physician said she could not live.

We tried another doctor, and he told the same story, said she could not live three months.

Soon after that I got her best for almost two years and was now almost bed-fast. The doctor said she had Consumption complicated with Heart Disease and Liver Trouble, and we were about discouraged.

I then heard of your remedy and told my wife to try it.

She decided to try it, and before she had taken half a bottle she felt better. When she had taken two bottles she was gaining fast, and before the third bottle was finished she completely recovered her health, and has been a well woman ever since, and her cure is a wonder to all.

Thank you very much for your medicine. I was taken sick and my trouble was pronounced Dyspepsia by a physician who relieved me some, but did not cure me.

My wife's advised me to try your Sagwa. I did so and was cured.

Soon after that I was attacked with the Grippe and could not get rid of it. Every day I was completely used up. At my wife's suggestion I tried Kickapoo Indian Sagwa again, and after using less than ten bottles I consider myself entirely well and have remained well ever since. I think I can say that Sagwa is the best remedy that a family can have.

In case of illness nothing bet- ter than I know of than taking a good dose before going to bed, and my wife says she would not think of leaving home without a little of Kickapoo Indian Sagwa. She says it saved her life with the help of Providence, and I can say that under the hand of Almighty God it is one of the best of the wonderful medicines of all medicines the great gift of nature, Kickapoo Indian Sagwa, and all the world should know of its intrinsic worth. Its value as a family remedy is beyond comparison.

JOHN S. WHITE, Kickapoo Indian Sagwa, made by Indians from roots and bark of their own country and curing, is obtained of every druggist.

1 per Bottle, Six Bottles for \$5.

WANTED.

Wanted, for a country store, a CLERK, female preferred, who is competent in single-entry book-keeping. Apply, giving references and stating salary expected. Address "E," THE EXAMINER Office. Aug 14—mon tu fri

THE PEOPLE'S HOME-GUARD!

It will guard you securely from disease

YOU Have a Very Bad Cough, Are Suffering From Lung Troubles, Have Lost Flesh Through Illness, Are Threatened With Consumption.

IT WILL Cure That Cough, Heal Your Lungs, Put Flesh On Your Bones, Prevent Consumption.

SMALL & LARGE BOTTLES 50c. & \$1.00. IT IS VERY PLEASANT TO TAKE. Ask for and be sure you get the "D. & L. Emulsion"

When we assert that Dodd's Kidney Pills

Cure Backache, Dropsy, Lumbago, Bright's Disease, Rheumatism and all other forms of Kidney Troubles, we are backed by the testimony of all who have used them.

THY CURE TO STAY CURED. Buy in bulk on receipt of price, 50c. per doz. Dr. L. A. Smith & Co., Toronto.

For Sale or to Let.

The Premises recently occupied by Mr. John Beer, Corner Chamberlain Fitzroy Street—a commodious and pleasantly situated house fitted throughout with hot water heating apparatus—with good stable and coach house. Apply to W. W. BEER, July 9

FAST TRAINS NOT DANGEROUS.

It May Be Safer Than Any Other, with Proper Construction and Operation.

In the current number of the Engineering Magazine appears an article on "Increasing the Speed of Railways" by William Babington, an eminent mechanical engineer. Some considerations connected with the subject are thus stated by him:

It may be said that in constantly demanding more rapid facilities of travel people invite a corresponding increase of the rate of danger to be encountered; but it is very doubtful if any proportion can be maintained. The facts go to prove, rather, that faster trains develop greater care on the part of the railroad people, and that there is really little, if any, more liability to accidents on such accounts.

As a rule, the "Wild Irishman" and "Flying Dutchman" and "Canon Ball" trains are run on schedules so arranged as to insure the utmost degree of safety, so far as an ordinary contingencies are concerned. Their success depends largely upon this point, and the railroad companies well understand that they cannot afford to take any avoidable risks.

The demand for increased speed is not the demand for increased rate of speed, but for increased safety.

Fast trains must have men of superior skill and caution to operate them; they must have good permanent equipment; and they must be provided with the most perfect appliances for safety and comfort. The general effect, in short, is to improve the railroad system in all respects, and to eliminate the causes of accidents and loss of life.

I then heard of your remedy and told my wife to try it.

She decided to try it, and before she had taken half a bottle she felt better. When she had taken two bottles she was gaining fast, and before the third bottle was finished she completely recovered her health, and has been a well woman ever since, and her cure is a wonder to all.

Brave Hannah Snell.

In Male Attire She Served as a British Soldier in the West Indies.

There have been many women warriors in the world, but it must be admitted that there have been very few whose deeds were such as to claim the admiration of the world for their great length of time. In the annals of woman's warfare there are generally stories of over-zealousness, leading to fanaticism and subsequent punishment and disgrace. Seldom, indeed, has a woman warrior been gratefully recognized by the government of her country.

Within the memory of our grandparents there lived in England a woman named Hannah Snell, who when but a girl, took the strange resolution of enlisting as a soldier. She served as a marine on one of the vessels of the fleet bound for the West Indies, and showed so much courage that she was repeatedly promoted. Her sex was unknown, and therefore it could never be claimed that Hannah Snell's success was due to partiality or favoritism. Once, when dangerously wounded, she extracted the ball herself, fearing that she might be discharged. After a time the Government on investigation of her really great courage granted her a pension of £50. She died full of years and laden with honors in the town of Wapping—Philadelphia Inquirer.

Manumot Oysters. Among the fine things that spring and summer deprive us of are oysters, since they are said not to be good in months that are spelled without an R. It is perhaps just to say that this should be as it is, because voracious man is so fond of oysters that if they were pleasant to eat all the year round we might find after a while that the like of lobster, crabs, growing more and more scarce every day. However fond of oysters men may be, they are not to be very careful of their health, and to eat exactly what kind of oysters the particular place in which they happen to be furnished for the delectation of oyster eaters. For instance, in London, a man who does not like the taste of copper would better not order them at all, for it is a singular fact that oysters served at London hotels taste as though they had been born and bred in a copper mine instead of in the waters of the sea. But most of all must it be remembered by those fortunate persons who have had the privilege of visiting Chincoteague, wherever that delightful place may be, that when they order oysters more than two or three, for, according to an item published not long ago in a number of the oysters of Chincoteague are the elephants of the bivalve kingdom. One of them was a regular Jumbo in size, says the foreign correspondent writing a pointed and three-quarters in length and five and a quarter in width, and to be sure that he imagined it was an oyster of this size which Thackeray spoke, when he said that after he had eaten his first live in America he felt as though he had swallowed a baby.

A half-dozen Chincoteague oysters on the half-shell would probably last in most families for a month at least.

Long Lived People. An English investigator has examined the habits of centenarians. They were almost invariably lean people, of spare habit, and of great moderation in eating and drinking. Of 37, three took no animal food, four took very little, 20 a little, 10 a moderate amount, and only one acknowledged taking much meat.

With regard to alcohol, the returns are equally sane, and astonishingly so. It was found to be the rule of life with these centenarians. Fifteen had been total abstainers, either during the whole or part of their lives; two took very little, 20 a little, 10 a moderate amount, and only one—Medical News.

How to Get a "Sunlight" Picture. Send 25 "Sunlight" Soap wrappers (wrappers bearing the words "Why does a Woman Look Old Sooner than a Man") to Lever Bros., Ltd., 43 Scott St., Toronto, and you will receive by post a pretty picture, free from advertising, and well worth framing. This is an easy way to decorate your home. The soap is the best in the market and it will only cost 1c. postage to send in the wrappers, if you would like the ads open. Write your address carefully.

DEAFNESS AND DULLNESS.

Defective Hearing in Children Often a Prime Cause of Mental Slowness.

A recent contributor to the Medical News brings evidence to show that a large proportion of a large number of children classed as "mentally dull" are affected with a degree of deafness. That deafness should have a marked effect upon the mental and moral development of a child is easily believed, since so large a part of everyone's education is transmitted to the brain through the ear.

Dr. Sexton, an American aurist, found a distinct defect in the hearing powers of 15 per cent. of a large number of school children whom he examined.

Dr. Weil, of Stuttgart, in an examination of over 6000 school children found that 30 per cent. of a nearly equal number examined, had defective hearing powers. He made use of the whisper test and the test for hearing the watch tick. The hearing was considered defective only when it fell considerably below the average.

Dr. Galle, of Paris, who has made extensive experiments in regard to the percentage of deafness among school children, found that a degree of deafness was the cause of the mental dullness in 100 out of 1000 cases.

Cases of deafness should not be allowed to go without treatment. Even the seemingly hopeless cases should be sent to a specialist for an opinion as to the likelihood of improvement under treatment.

"Running ears" should never be neglected. Such a condition makes the child a disagreeable neighbor in a school. The disease is always a source of danger to the child itself, and may be a source of danger to its companions.

During an attack of measles or scarlet fever ear complication should be guarded against by cleanliness of the nose and throat. If the ears discharge they should receive treatment aiming at cleanliness of the aurial canal.—Youth's Companion.

No Money in Tumbling. "Acrobats are plenty nowadays," says Fred Humbert. "Tumbling doesn't attract any more."

Old Fred must have been in the ring at least 40 years ago. He is about 60 years of age now and is doing the mounted acrobatic work with Barnum & Bailey. It is the same Herbert Brothers act, but it is done on barebacked horses. Fred is still a magnificent specimen of physical manhood.

"Modern craze for athletic sports is responsible for them," he replied. "There are a great many young fellows who are quite as good as professional. Every college in the country turns them out. Children pick up tumbling and boxing and club swinging from their elders and easily become proficient. There is now no trick in the most difficult feats on the horizontal bar or in the ring. They are too common."

I looked at the old athlete's broken stick and his missing ear, the other ear being a well worn and concluded to stick to my own profession. The ears were sacrificed to the feet of the man who turns somersaults and alights on the shoulders of the victim.—N. Y. Herald.

How to Lighten Railway Trains. There can be but one opinion as to the relative dead weight now carried and the vast importance of lessening it, writes W. Barnett Le Van in The Engineering Magazine.

To do this effectively each passenger must be assigned to one seat. If trains were so made up, with light weight cars, with comfortable and airy seats, and with doors on the sides so that the cars could be coupled up close together, and parlor and smoking cars displaced, the weight would be lessened and the vast importance of lessening it, writes W. Barnett Le Van in The Engineering Magazine.

BABY RITTED, Infant, etc.

CURED BY SKODA'S!

"Baby Ritted, was a terrible sufferer from Eczema of Scalp and Face. The whole Top of Head was covered with crusts 1/2 inch thick, and Face and Ears lacerated in similar manner. No rest night or day for child or mother. Eczema and Glaucoma covered with Blood, where the little one endeavored to ally the itching and burning, by scratching the raw surface of Face, with its tiny fingers. Rubbing of nearly all kinds had been used, but it never began the growing work, when the mother began the use of SKODA'S GERMAN SOAP, and SKODA'S OINTMENT. These Remedies used externally, four or five times daily, for a few weeks, produced a clear and fair skin, an ever adorned Baby's Body."
