Island Cattle Marketing Possibilities Interesting

By NEIL A. MATHESON
Some interesting action is on the way, I suggest, when the directors of the P.E.I. Beef Producers' Association meet here in a few days time to discuss a report on marketing which their vice-president brought back from Toronto and Montreal.

Chair Mayhew, Margate and Glen Cotton, Provincial Beef Fieldman spent a week or more watching beef cattle sales in the Ontario Livestock Marketing Yard at Toronto—they were also in Montreal—and talking to just about everyone connected with the marketing operation.

I suspect it was my friend Leo McIssac—he's president of the beef producers—who sparked the fact-finding trip. The information is interesting to a cattleman, and we've lots of them on the Island.

The story on prices is told elsewhere in this paper. I asked the Mayhew-Cotton pair how much it would cost to send a beef animal to Toronto. The answer was that two and one-half cents per pound would cover all costs.

I asked them how much Island cattlemen could make at present price comparisons, by shipping cattle to Toronto. The answer was they'd make \$10 to \$25 on a steer around 1,000 pounds.

I haven't any cattle now—I quit that part of the operation when my other work began taking all of my time—but I'd be interested if I was feeding steers as I did a few years ago.

I was interested particularly in the condition the cattle were in as they entered the ring. Cattlemen here are accused of filling their cattle up just before they go to be weighed. Some of them do—after all the temptation is strong. But the Mayhew-Cotton pair told me they didn't see any hungry-looking cattle entering the sales ring at Toronto.

The people running the yard assured them the animals are fed, rested and watered when they come a distance. They are held an extra day if they are not in bloom, it was explained.

There were cattle going through that yard filled with more than I've seen cattle going to slaughter here, one of the men told me.

HOW PRICES ARE SET
Also interesting was the story on how the yard is run. It's the commission men who set the prices, all is not left to the buyers, the report said. "Tuesday morning, for example, the man sent a steer into the ring with a price tag of 27 cents on him. The price offered was lower, so he brought the animal out. Next day the same steer brought 28½ cents, the Island pair said.

Interesting also was the story brought back from the top commission man regarding Island cattle. "Have your farmers ship a few carloads to try it," he suggested. There was a promise of co-operation "I can let you know when the market is good," he promised.

As I've said, I expect some interesting development in the next week or so. It will be interesting to see just how the experiment works out. Apparently it's going to be made.

POTATO PRODUCERS
I had an interesting talk a few days ago with George Howatt, president of the Potato Producers Association who has some interesting suggestions for stirring up interest in his association.

One part of the plan is the holding of perhaps one half-dozen meetings in each county in the next year. The idea is to go to the people in various parts of the province, if they won't gather from all over the Island to a central place like Charlottetown.

Another idea I remember is the request by the Producers Association executive to have an extra field inspection of Foundation seed potatoes by the inspector. The general idea is to step up the quality.

I've left my notes at home, I'm afraid, and I'm writing this column in the office, so I'll have to postpone comment on the

rest of the observations Mr. Howatt passed on to me until I get another look at them.

Vere Beck—Guardian News Editor, told me a story just now I'd like to pass along to you. John Bruce, Heatherdale has a cat that's a great mouser—she also murders the rats.

she also murders the rats. She was asleep in the living room one evening recently, when there was a TV program which showed some rats. The cat awakened in time to see one of the big rats crossing the television screen. Suddenly she

That was a challenging statement by R.L. Burge that Prince Edward Island potatoes are in the best position marketwise of any on the North American continent. "Two years ago," he said, "we were in second position, Idaho was ahead of us. Last year we were even with Idaho. This year we are on top."

It's not so long ago that a man like Mr. Burge must have been looked at askance when he suggested we might reach the position where Island potatoes would be so good the premium would pay for the freight. It looked pretty imaginative at the time, but the premium is more than paying the freight right now.

It's due to a combination of excellent quality potatoes here, and some of our competitors' crops being damaged badly by frost last fall. Let's hope we can retain a sizable premium on the coming season's crop, even though the competition may well be stronger.

The latest report on the main Canadian markets—Toronto, Montreal and Ottawa—indicates that "during the past 24 hours" that of the potatoes entering those three markets, and other Quebec and Ontario points by rail 107 carloads were from Prince Edward Island and only 31 from New Brunswick.

May I suggest that as many farmers as possible who live anywhere close to Kensington hear Dr. W.A. Jenkins in his talk tonight at the High School. This man has an unshakable belief in the value of agricultural education. He's using all of his tremendous energy to build

up the classes at Nova Scotia Agricultural College of which he is the principal. They have a Farm Diploma course there, which offers a practical course to young farm lads. Several of my friends whose boys have taken the course are loud in their praise, several of them were young Sterling Wood, M.L. Herbert and his son, Robert Howe, are two of the ones I have in mind.

This is our only Maritime agricultural college, it's most encouraging to see a young principal whose initiative and energy are being used to build up this centre of agricultural education.

"Bill" Jenkins has an interesting story to tell, and he has a most interesting way of telling it. Take it from me, this man is worth hearing.

Don, Idaho was ahead of us. Last year we were even with Idaho. This year we are on top."
