

FROLICKING FRESHMAN

By Dean MacMillan

Hello freshman how are things going? Things are excellent with me. Well it seems that time has once again flown by. Regular classes are coming to a conclusion and exams are about to begin. Please don't get worried or flustered about your exams, there is no need for that. Reassure yourself of your abilities. After all, you have successfully made it through this year. You have gotten through all the rough times and come out on top. There is no reason for you not to do just as well in your exams. Study hard and think positive and you will come out on top.

Speaking of time going by this is the last edition of the Frolicking Freshman. It has been a tremendous pleasure for me to write this column. I hope that you have enjoyed reading it

as much as I have enjoyed writing it. In January when I started writing this article, I told you that one of the main goals of the Frolicking Freshman was to give freshmen a sense of belonging. I believe that this article has achieved this goal.

I think that we as freshmen can call ourselves a pretty good family. I would like to say that it is you that have made this happen. You are all a great bunch of students and deserve a lot of credit for contributing to life here at UPEI.

As for my job as freshman rep.: well that too will soon come to an end. It has been a tremendous pleasure to represent you. I hope I have been as helpful to you as you have been to me. You freshmen have really inspired me. All of you have a tremendous amount of talent and initiative. You have been a great bunch to represent. I can honestly say that I believe we will make the best sophomores this university has ever seen. Indeed when it comes time for us to graduate in 1990, I think we will be remembered as the students who

really got things moving at UPEI. Things are only going to get better for us and personally, I can't wait for next year. Thank you all very much for your support over the past year. It has been great to meet so many new friends, and I am sure that all of you have made many new friends as well. I would first of all like to wish you all the very best of luck

in your exams. I am confident we will all do great (if I could only afford a new pen). Secondly, have a wonderful summer. Swim, party, eat, drink, get burnt, and have a ball. Also make sure you come back to good old UPEI this fall. Next year is going to be a fantastic year. Good luck to you all. I would like to leave you with a few lines from

Norman Peals book "The Power Of Positive Thinking" (any bookstore).

"Heart is the symbol of creative activity Fire the heart with where you want to go and what you want to be. Keep the faith expect the best and smile as you inevitably succeed."

Have a great summer. See you next year.

...continued from Page 6

ture of biological warfare, he said.

"The key thing about chemical and biological weapons is they are useless in a military sense unless the attacker has defenses against them — in testing defenses, they are therefore developing the ability to use the same weapons offensively," he said.

Spiegelman emphasized that funding sources, rather than the actual content of the research itself, are crucial in determining whether experiments should be classified as "military."

Although projects funded by the Defense De-

partment may seem perfectly benign, Spiegelman reminded his audience that the purpose of the military was ultimately to kill people more efficiently.

He recognized that techniques developed in his research into bacterial growth rate could be adapted to inhumane purposes.

"Anything that you do which increases the technological base of society, which makes people able to do anything more efficiently, the military can use," said Spiegelman.

He cited the example of a researcher who studied

patterns of bird migration in the South Pacific during the Vietnam War.

Several years after completing his research, the scientist learned the project had military funding, since the army was worried the birds might transport weapons used in Vietnam back to North America.

Given the potential abuses of research, Spiegelman concluded by urging science students to join political parties and assert more control and direction over Canadian science policy.
