

Geneva Failure

On the 22nd of this month, ministers of the NATO countries will gather in Ottawa for one of their regular meetings. They will be discussing one of the most publicized problems in recent years—that of the spread and control of nuclear weapons within the alliance.

No progress has been made in the test-ban talks at Geneva. A recent British-American note to Soviet Premier Khrushchev on the subject met with a negative response.

It is also reported that the American Chiefs of Staff, and the Secretaries of the Army, Navy and Air Force, have all stated their further testing by the United States is necessary.

This suicidal race for bigger and more devilish devices for mass slaughter will go on, contaminating the atmosphere and poisoning people's minds as well as bodies.

Trade With Japan

From Mr. Alfred Bissonnet, Canadian trade commissioner in Tokyo, comes word that Canadian exporters may some day look to Japan for overseas sales as large as the present \$1,000 million export market in Britain.

Moreover, future prospects don't lie only in industrial materials and wheat, which now make up about two-thirds of our exports.

One big reason for this switch is the fact that all Japanese school children receive free lunches that include milk and bread.

increased Canadian sales of such items as powdered milk, oilseeds, purebred livestock for the developing Japanese farm herds, and forage crop seeds to provide fodder supplies.

First, however, we must come to a more equitable trading arrangement with Japan. Mr. Bissonnet didn't mention this in his statement; it has too many political implications. But Japan has been asking for increased quotas on its textile and other items.

It would be paradoxical if the first concrete trade deal by the new Liberal administration—seeking now to align itself with American and British efforts for a trans-Atlantic tariff slash and for free trade—should involve further Canadian restrictions on Japanese imports.

Red Shield Campaign

The Salvation Army's annual Red Shield campaign is being held during the current month. The proceeds will make possible the continuation of Salvation Army services in the community for the next year.

There are few organizations in Canada, or for that matter in the world, that have done more for people that need help most than the Salvation Army. Its trained officers know and understand the hard knocks that life can give a person.

It is also reported that the American Chiefs of Staff, and the Secretaries of the Army, Navy and Air Force, have all stated their further testing by the United States is necessary.

Moreover, future prospects don't lie only in industrial materials and wheat, which now make up about two-thirds of our exports.

One of the things contributing to the high cost of drugs in Canada is the federal sales tax. The Canadian Pharmaceutical Association has done a service to the public by bringing the effects of this hidden tax out into the open.

Taxing The Sick

According to a spokesman for the association, the average drug store would lose \$1,200 a year if the tax was removed because the normal 40 per cent retail mark-up on drugs is based on a price that already includes the 11 per cent tax.

When the Conservative party es. Fidel Castro still raves at great length over the television a speech he has never seen so much of his time and that of his associates is spent in running the Government.

The island is in the midst of a social revolution. Its agrarian program, industrialization, education, housing, retraining, public health and all the paraphernalia of "Marxism-Leninism" in the labor unions, the schools, the militia and the Government are going full blast.

A fearful mess has been made of the economy. But Cuba is a fertile island with a mild climate, so nobody starves.

OLD CHARLOTTETOWN

Firing a salute at Fort Edward, Victoria Park, in 1885

OTTAWA REPORT by Patrick Nicholson

"Backroom Boy" On Job Lookout

"Mel Jack is looking for a job." That is sensational news to the many denizens and visitors of Parliament Hill, to whom Mel is known personally or by reputation as far, far and away the most effective backroom boy."

Without taking anything away from the successful politician, there are a few things that Mel has done which George Hees has become, it is only fair to Mel Jack to describe him as the Hees' Right Hand."

OTAWA VALLEY PIPPIN Melville Rait Jack was born 51 years ago, at the little Ottawa village of Pippin, Ontario.

Then followed five years as executive assistant or private secretary to premiers, party leaders or ministers in the Ontario Legislature. His first job was with Hon. W. L. Morton, advice giver and Minister of the Interior.

Jimson Weed Can Be Killer

By Dr. Theodore R. Van Dellen TWO children were poisoned after eating jimson weed seeds. Jimson weed. One was a boy of three who became markedly disoriented. The other, a girl of five, exhibited the same symptoms except for convulsions.

There is no specific remedy for this condition which resembles belladonna poisoning. This means prevention is imperative and we wonder why a common plant is not eradicated completely. Jimson weed, an annual, grows in most parts of the United States. It is dubbed stinkweed or thorn apple and has been a problem for decades.

The poisoning is called milk sickness because of the common enquirer symptoms after drinking milk that comes from cows that have eaten the Jimson weed and develops the trembles. Some of the poison gets into the milk and some of which drinks this milk is likely to become ill.

Learn to recognize this plant and destroy it immediately. It is found in many pastures but in back yards, playgrounds, and public parks. Little children are especially likely to be attracted to the flowers and young plants. It is a small but very poisonous weed. The disease is not common today because most of the milk comes from large dairies. The milk is poured into vats and any that might be contaminated is so diluted as to be safe.

NOTES BY THE WAY

"Daddy," the six-year-old boy asked, "before you married Mommy, who told you how to drive?" — Globe and Mail.

"What are you studying at University now?" asked the fond new English mother of a 12-year-old. "I've just taken up molecular." "That's lovely. I hope you like them. I tried to get your father to wear one, but he couldn't keep it in his eye." — Montreal Star.

A British minister visiting Canada says that for too long the church has been answering questions that nobody has been asking in these difficult days. A question has an answer no one wants to hear it — Peterborough Examiner.

A Useful Start

By Alan Harvey Canadian Press Staff Writer

"Canadian Press Staff Writer" All the signs are that Prime Minister Pearson has achieved his objective in bringing him to London for discussions with Prime Minister Macmillan.

On both the Canadian and British sides it appeared to be felt that a useful start has been made in the future with a clearer understanding. Almost certainly no final decisions were taken in the meeting. There are signs that Canada may eventually agree to participate in the proposed NATO inter-allied nuclear force but no pledge has been given. Defence probably will remain in the melting pot.

Pearson is believed to have expressed himself in sympathy with recent efforts by Macmillan to find out whether Nikita Khrushchev really means business about a nuclear test ban. The Canadian prime minister feels, as does Macmillan, that if the relatively narrow differences separating East and West on the issue can be bridged, a real breakthrough may be achieved toward general disarmament.

Our Yesterday's

(From The Guardian Files) TWENTY-FIVE YEARS AGO MAY 6, 1938

Harold C. Bohaker, of Annapolis, N.S. has received the appointment of representative of the Sun Life Assurance Co. for the province of Prince Edward Island. He is accompanied by his wife and one child, and will reside in Charlottetown.

The Duchess of Kent believes in the educational value of nursery rhymes and Pables. S. he has had them woven into nursery rugs for her children. Princess Alexandra's rug, 7 ft. 6 in. by 4 ft. has 34 illustrations of LaFontaine's fables and will become a heirloom in the Royal Family.

TEN YEARS AGO MAY 6, 1953

George Melillo was in the chair and Ross MacKenzie was on the bench at the recent meeting of the Y's Men's Club of Summerside at the Y Centre. Twenty members indicated their intention of attending the Y's Men's Convention to be held in Halifax. A film was shown on fishing in Newfoundland.

A new enterprise in Alberton, known as Hardy's Men's and Boys' Clothing Store began operation last week. Besides the large display of merchandise, orders are taken for made-to-measure suits and coats for both ladies and gentlemen.
