

**Is the baby too thin?**  
Does he increase too slowly in weight?  
Are you in constant fear he will be ill?  
Then give him more flesh. Give him more power to resist disease. He certainly needs a fat-forming food.  
Scott's Emulsion is just that food. It will make the baby plump; increase the weight; bring color to the cheeks, and prosperity to the whole body. Thin children take to it as naturally as they do to their milk.

Through tickets to be had at Grand Trunk, Canadian Pacific, Intercolonial and P. E. I. Railways, and on the Company's Steamships connecting lines in United States.

**F. W. HALES, SECRETARY**

**Of Special Interest to our Farmers**

**Ornamental Trees and Shrubs.**

Year by year we find a growing desire amongst our people to plant around their dwellings and along the road-side ornamental trees and shrubbery. Every farmer thinks more or less of planting some trees to make his home more attractive, but the dairy farmer's time is often too fully occupied to attempt planting and caring for any considerable number of varieties. The first step to be taken, and the one too often neglected when planning for the ornamentation of the home in this way, is the reparation of the soil for a nice lawn. If only a small place is to be planted, the Norway and Sugar Maple, the American and European Elm, the Austrian and White Pine, and the Norway and Black Spruce make very handsome specimens. For larger lawns the above named varieties with the Colorado Blue spruce, Pyramidal Arbor-vitae, Purple Birch, White Birch, European Linden, European Mountain Ash, American Ash, Box Elder, English Oak and Red Maple. In planting trees about a house they should be arranged so as to preserve an outlook when the trees have grown. Imitate nature as far as possible, so that from the windows of the house the view shall be pleasing. Do not plant too close to the house or overcrowd the lawn. Always bear in mind that the trees are planted to remain, and the planter should have in mind at the time of planting the size the trees will attain when they are 25 or 30 years old so that the mistake of close planting may be avoided.

**A Good Lawn.**

There is nothing so attractive around a place as a good lawn. In order to have such a lawn the ground must be thoroughly worked up and enriched. It is impossible to form a good lawn by simply ploughing up a piece of worn-out land and seeding it down to grass. Plough deeply and thoroughly work in a good dressing of well rotted stable manure, then harrow and grade off the land so as to make it as even as possible for seeding. A mixture has been tried of 5 pounds of Kentucky Blue Grass to 1 pound of White Clover, sown at the rate of 5 bushels per acre, which has made a good lawn. Another mixture for lawn seeding that has given good results is 2 pounds of White Clover to a bushel of half and half Red Top Blue, Grass at the rate of 5 bushels per acre the Red Top stands than the Blue Grass, but rougher better the land is inclined to be wet or shaded, the first named mixture would probably give the best satisfaction. If not sown thickly, the Red Top is liable to grow bunchy, and make an uneven lawn. The seed should be sown carefully so that a good even growth will be obtained. The best way to cover the seed is to scatter, with a sieve, fine rich earth over it; should it be raked in the greatest care is necessary to get it covered evenly, after which roll the lawn thoroughly. The best time to prepare a lawn is in the spring and it will require little attention again that season except to keep down any weeds that may grow.

**Grass and Grain for Working Horses.**

J. A. MacDonald, of Hermanville, writes to the Country Gentleman: I have always believed that our farmers feed too much hay to our horses. Certainly we feed fully twice as much as our friends in the city, and only about

half as much grain as horse-owners in the city feed. Since June 1st, I have been feeding my horses by a novel method, which I find eminently satisfactory. At the end of May, this year, I find myself without hay for my horses and a large amount of work to do. I could procure hay from some of my neighbors but of very poor quality. This kind of hay I did not want.

Up to this time the grass pasture was very poor, but along toward June it began to be fair. I therefore decided to get along without hay, and depend entirely on pasture and grain. On the evening of June 1, I turned my work horses to pasture. In the morning I took them up and gave them a feed of oats and bran, about five quarts per horse. That's all they got for breakfast, in addition to what grass they had eaten. At noon they were fed no hay, only a feed of oats and bran—six quarts per animal, and nothing else. At four o'clock, as is usual with us, we took them up for tea, watered them and fed another feed of oats. At sundown, when we knock off work, the horses were turned out to pasture. This has been and is still the "bill of fare" for my horses—grass during the night and grain (about a half-bushel of oats, in three feeds) during the day. As a result my horses are doing splendidly and gaining all the time.

**Oats After Oats.**

All farmers know that oats are an exhaustive crop, and also one that it is especially hard to get a clover or grass seeding with. Where winter grain is not grown, and oats are the chief small grain raised, one failure to seed is apt to be followed by others, until the land becomes so exhausted that neither oats nor grass can be grown. Most of these failures to seed with spring grain come from ploughing the land in early spring, thus turning up a lower strata soil that has not been properly mellowed by freezing. The remedy for this is to autumn plough the land leaving it rough, and then so soon as it is fit to work, cultivate it lightly and put in the grain and grass seed before ploughing can be done, if the frost freezes the soil an inch or two after the grain and grass seed are sown, it will be all the better for both. If the second crop of oats fails to give a grass and clover seeding, plough the stubble in the autumn after the oats are off and sow wheat or rye, seeding with grass seed in the autumn and with clover seed in the spring. This rarely fails to give a good grass catch and if the season be favourable, there will be some clover with it, even on poor thin soil.

**DR. GAUTHIER ENDORSES**

The statement that Mr. Major owes his life to . . . **DR. CHASE'S Kidney Liver Pills**

Dr. J. T. A. Gauthier, of Valleyfield, Que., writes: "I, the undersigned, certify that the contents of this letter, in regard to the cure of Mr. Isadore Major, by the use of Dr. Chase's Kidney-Liver Pills, is correct."  
Here is Mr. Major's letter: "After 20 years of suffering from backache and kidney disease I owe my life to Dr. A. W. Chase. I had tried an endless variety of remedies to no avail, and on the recommendation of a friend began the use of Dr. Chase's Kidney-Liver Pills. Two pills that night and two next morning gave great relief, and I continued their use until now I am completely cured. My friends are surprised and pleased to see me well again, for I spent hundreds of dollars in vain trying to get cured. Before using Dr. Chase's Kidney-Liver Pills my back ached so I could not put on my shoes and couldn't lift 20 lbs. My shoulders were sore, I had headaches and a bad taste in the mouth. These troubles are now entirely gone and what I say I am ready to prove. I have told my friends of my wonderful cure, and many have been greatly benefited by using these pills."  
Dr. Chase's Kidney-Liver Pills are the greatest kidney cure the world has ever known. One pill a dose, 25c. a box at all dealers, or Edmanson, Bates & Co., Toronto.

**C. C. CARLTON, JR., Sec'y-Tre**

BY THE ST. LAWRENCE.  
Mr. W. H. Odell, of Brockville, Strong Believer in Dodd's Kidney Pills.

Brockville, Oct 2.—Nowhere in Ontario are Dodd's Kidney Pills more appreciated than among the St. Lawrence River, and the Great Lakes. Where there is water there is damp and danger from rheumatism and colds. The kidneys are the organs most susceptible to colds and the getting out of order therefrom causes rheumatism, backache, etc., Mr W H Odell, of Brockville, writes to an enquirer as follows:—

Brockville, Aug 23th.  
Dear Sir,—I received your letter and intended to answer it before, but I am ashamed to say neglected to do so. Dodd's Kidney Pills have done me the world of good. They are a splendid cure for the kidneys and I am always ready to say so. I remain,  
Yours truly, W. H. ODELL.

**Weary of Experimenting**

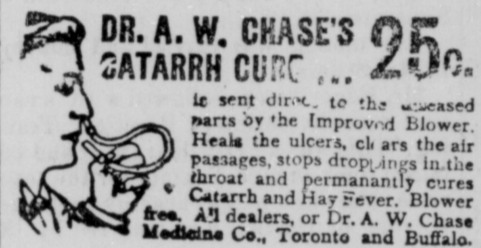

With salves, suppositories and ointments and dreading a surgical operation, scores and hundreds have turned to Dr. A. W. Chase's ointment and found it an absolute cure for the terrible itching, and it is very seldom that more than one box is required in effect a permanent cure.

She—I will marry you on one condition you must give up your pipe. He—I will on better than that, I will buy a brand new one.
