Pilgrim Reports  
Partial Cure

MONCTON, N.B., July 10—Two special Canadian National trains with pilgrims from the Maritime Provinces returning from St. Anne

de Beaupre arrived in Moncton this morning, the train with pilgrims from Nova Scotia continuing on through.

Among the pilgrims from Prince Edward Island is Paul Gillis of St. Peters who was unable to move his legs but is now able to partially straighten them.

Rancher tests three feeds . . . .  
MARMILL PROVES the BEST

READ T letter from Mr. Stephens of the Roselawn Farm. Note particularly the following statements: "We are using Marmill Products exclusively this year." "No. 3 lot, or the foxes fed on Marmill, had good length and excellent pelts. Our fur valuator stated that the Marmill-fed pelts were much heavier than the others, besides being larger. These pelts were valued at an average of \$10.00 higher than those in the other two lots."

Now, ask yourself this question: Can I afford NOT to feed Marmill Fox Foods?

The facts and figures given in Mr. Stephens' letter substantiate the high claims we have made for Marmill Seasonal Fox Foods. Feed Marmill Foods according to schedule, the foundation is laid for growth as well as for fur texture in what the pups eat during the Spring and Summer months. Marmill Fox Foods are properly balanced in proteins, minerals, vitamins and carbohydrates.

Recessors Marmill Limited

May 6th, 1936.

ATTENTION MR. A. E. REESOR.

Dear Sir:—I hereby confirm my order of a few days ago for ten tons of Marmill for meal and cubes. We intend using Marmill products exclusively this season.

I may say that I am more than pleased with the results obtained last year, when your feed was fed to thirty foxes in our ranch.

We selected three of the best, as well as the most widely advertised feeds on the market and thirty foxes were put on each feed. We will call the other two feeds No. 1 and No. 2 as we do not wish to disparage any company's products. All were fed the same quantity of biscuits and meat, until the foxes were at an age where they should have had their growth, after that time they were fed the straight cubes. No. 1 lot were off color, but had size. No. 2 lot were small, a good color, but short of fur. No. 3 lot, or the foxes fed on Marmill, had good length, in short they were excellent pelts. Our fur expert and valuator, stated that the Marmill fed pelts were much heavier furred than the others, besides being larger. These pelts were valued at an average of \$10.00 higher than those in the other two lots.

About one-third of each of the three lots were picked out as breeders. These were not put in sheds and here again the foxes on Marmill feed stood out, as they did not lose their color.

Yours very truly,  
ROSELAWN FARM,

For E. E. Stephens.

TIMELY NOTES ON TOPICS  
CONNECTED WITH  
Silver Fox Farming

E. E. Parkman, Summerside, has had good breeding results with his fifteen pairs of silver foxes, as out of the 75 pups born 73 are looking for the fed pall twice daily.

A. E. Reesor of the Reesor-Marmill Fox Food Company, Markham, Ont., spent the past week touring the province and calling on patrons of his products. He expresses himself as delighted with the beauty and fertility he saw and the kindness of the people he met. We are indebted to Joseph Ken-

supply the real article, but the prices asked are pretty high.

There is a rhyme re buying mink which runs as follows: I wouldn't buy on the strength of their fame, I wouldn't fall for the name—of a name—A little mink will have to show class Before I succumb to a gib line of gas.

nedey, Manager of Eastern Furriers, Charlottetown, for late copies of the American Furrier, published in New York. They are full of beautiful designs showing mink, martens, silver fox and other furs made up in the latest fashion vogue. Fromm Bros. have a full page ad showing a three skin silver fox make-up. One skin forms the neckpiece and the other two skins drop in front. There are extracts from the ad.—

"Pedigreed and luxurious—this swirl of silver fox on shapely shoulders. Paris is right when it decrees that a silver fox must be bright with silver—must shimmer with the rare brilliance of clear silver markings on blue-black fur. And no fox is so bright with silver, so facile and free of tinge as the Fromm silver fox. For every Fromm fox is pedigreed—its frosted beauty bred in through generations of careful selection.

Lend the final touch of ennoblement to your evening gown highlight the tailored perfection of your suit, emphasize the "rightness" of every ensemble with a luxurious silver fox scarf that bears the distinguishing Fromm Medallion—the ultimate assurance of your own aristocratic taste. Fromm Brothers, Inc., Hamburg, Wisconsin."

Sealed in the nose of every genuine pedigreed Fromm fox pelt is a medallion. Mail this medallion to Fromm Bros. and you will receive the pedigree of the silver fox you purchased. There is a cut of the pedigree shown in the ad.

Glancing her and there through the magazines I was struck with the many illustrations showing silver fox worn as neck-pieces, collars, capes and for a variety of uses, which goes to show that the designers are not neglecting it by any means.

Next in popularity—if not quite as popular—is mink, which has made the most rapid strides in my lady's favor of any fur in recent years. Mink ranching has come to stay and those parties in Quebec, New Hampshire, British Columbia, Western Canada and the United States who were far-sighted enough to start out with good breeding stock will reap a great reward.

The writer has been asked several times to give his opinion as to whether it would be a good thing for the average fox rancher to take up in this province. My knowledge of the matter is not great, but my impression is that it would not be. One reason is that it is very difficult to get good breeding stock. Those who have a-B-1 mink are loath to part with them. There are large ranches in Quebec stocked with fine quality animals that could

The best wild mink are the E. B. or Interior Labrador. They are dark, silky and fine in every way and are found in a huge territory extending from the northern tip of Ellesmere Island south to take in Baffin Island and then along the east shore of Hudson's Bay in Quebec south to Richmond Gulf, thence east to Lake Kamlaptekan, thence southwest to Lake St. John and along the Saguenay River, thence along the north shore of the Gulf of St. Lawrence and thence north along the Labrador sea coast.

The heart of this territory curiously enough, is in Quebec and not in Labrador as one would suppose. It is a stark wilderness traversed by streams and rivers, studded with large and heavily wooded, sparsely populated with nomadic Indian trappers with here and there a white man's fur trading post.

It is from this region that the Hudson's Bay Company and others secured breeding stock which has been made the foundation of some of the best mink farms now being successfully carried on. Mink is also found in various parts of Quebec, Nova Scotia and Prince Edward farms have sprung up like mushrooms and highly thought of. Mink Island, The Nova Scotia mink are rooms and in Germany there are some with the mink population running into thousands. The Norwegians have gone very staid with mink too and with their care and methodical way of handling things, are successful.

It is this tremendous fur farm production which has really made the present boom in mink furs. The wilds and the fact that these were small supplies available from the difficult to match up because they came from so many different places prevented the featuring of the article to any great extent heretofore. Now with fur farms throwing on the market anywhere from 100 to 2000 skins it is possible to match up very easily and uniformly.

It may be of interest to our readers to know that Dr. Leo Frank of Rosebank Fur Farms, was the first rancher in the world to experiment with a large pen, or as he called it, "playground." Now this type of enclosure is used by hundreds yes, perhaps thousands. The Fromm Brothers and Nieman Brothers being the big noise with their playgrounds covering thousands of acres.

In these notes some weeks ago we mentioned that certain ranches were affected with white diarrhoea. This has been found to be more general than we expected, showing up in various parts of the province and taking a considerable toll of young fox pups. Various causes have been assigned to it, but on being investigated could not be substantiated. Some think the germ

was in the air and call it stomach flu, similar to the trouble that affects humans periodically. The fox pup suddenly goes off its feed, becomes very weak and in two or three days passes out.

Now that the hot weather is here it is perhaps well that a few pointers on the care and preservation of meat should be given, as well as simple rules for judging quality. To judge meat run a small portion of it over your fingers. If it is slippery and watery it contains little nutritive value. If it is more firm and a bit "gluish" it contains more protein substances. Upon examining the marrow of good animals it will be firm. In a run-down animal it will be a jelly-like consistency. Poor, thin cows have little nutritive value, and a cow raised for milk if not given a balanced ration right along, draws up on its own system. Furthermore, it was not primarily bred for meat but for milk. Shorthorn and Pol-Angus cattle will dress out better than milk cows.

Blood. Blood is highly nutritive, but should only be taken from healthy animals. It contains various salts and a quantity of iron, all of which are in an easily digestible form. It is also a good appetizer.

Tripe. Be sure that it is washed well and so that in doing so you do not overlook some of the folds. Clean it thoroughly and hang it up. Do not put the tripe to soak as it is likely to sour.

Liver. Feed only the good livers. Examine them by slicing into them for any disease or liver flukes. Live flukes can easily be detected as you will find them squirming little creatures similar to small portions of a tapeworm.

Meat of animals that died by accident. Such animals should be bled at once and the intestines removed within an hour or so. If left in the animal for several hours bloating will take place and the gas will effect the flavor of the meat which is easily detected by the fox.

Preserving meat. The warmer the weather the more care must be given to meat for preservation. If you are equipped with a refrigerating system your work will be made much easier. In this country do not have them. Hang the meat where there is sufficient ventilation and where it can be kept from flies. Meat is kept very successfully by some ranchers in compartments, the walls of which have screens made of small mesh copper wire. This allows the air to circulate which allows the meat to breathe through it and keeps out the flies. It is better to construct this in a shady place but have the floor raised some inches off the ground.

In warm weather butcher in the late afternoon; it is cooler and you will not be bothered by flies. Place the meat in a cool place. Place four and a little pepper rubbed on the meat will also keep the flies away. If there is a slight mold on the meat you are using, wash it in salt and water. Such a solution helps to get rid of any slime. Animals prior to being butchered should be corralled for twenty-four hours and fed no food but plenty of water. This helps the animal to partially cool off its own system and the meat will keep longer if this precaution is taken.

As meat forms the largest part of the ration of the fox and is absolutely indispensable it is fitting that we should take every precaution with it. The wonder is that with the vast amount of it used and the fact that it is often slaughtered under very unsanitary conditions and shipped about in the same way, an epidemic of some kind does not occur, or more fatalities from feeding it.

PARK CORNER SCHOOL

Following is the standing of Park Corner School for June: Grade X-1, Annie MacLeod. Grade VII-1, Gertrude Graham; 2, Willard Stewart. Grade VI-1, Sutherland Montgomery; 2, Layton Stewart. Grade V-1, Irene Underhill. Grade IV (Sr.)-1, Roma Montgomery; 2, June MacKenzie; 3, Urban Harding. Grade IV (Jr.)-1, Doris Delaney. Grade III (Sr.)-1, Everett Burk. Grade III (Jr.)-1, Jean MacKenzie. Grade II-1, Jimmy Montgomery; 2, Margaret Montgomery. Grade I- (a) Vernon Cousins; (b) Boyd Adams; (c) Maurice Cousins; (d) Vernon Harding. Perfect attendance—Jimmy Montgomery, Margaret Montgomery, Nina MacLeod, June MacKenzie, Roma Montgomery. Perfect attendance for year—Jenny Montgomery. Highest Average—Jean MacKenzie, 85%. Teacher—Annie M. Dymont.

ROYAL FOX FEED

Reports coming in from all over the country indicate exceptionally fine results from Royal fed ranches. Here is an excerpt from a letter received a few weeks ago: "We have now looked at 88 females and have 210 pups, and have 5 more litters yet to come. We had 60 pups from 3 of our females." Like this, combined with Royal economy and service prove that your choice of fox feed this year should be Royal.

Presentation and Address to Rev. and Mrs. Boothroyd

At Hunter River, June 29th, a large audience representative of the four appointments of the Hunter River Charge, United Church of Canada assembled in the Masonic Hall to bid farewell to their Pastor and wife Rev. and Mrs. F. E. Boothroyd who for the past five years faithfully and efficiently served this charge. They recently accepted a call to Shediac, N. B. Mr. D. M. MacDonald, Hunter River, was appointed Chairman and after a few introductory remarks called upon Mr. Edison Easter, North Wiltshire who read a very appropriate address. At the conclusion of which Mr. George Hinson, Hampshire, presented Rev. and Mrs. Boothroyd with a purse. Both replies were very fitting to this act of appreciation and respect. Short addresses were then given by members for different parts of the field. All expressing themselves as very grateful for the splendid work done and deeply regretted the fact that this charge was losing such a capable Pastor and wife. These present were then treated to ice-cream and cake, served by the ladies. After singing "God be With You till we meet again" and Benediction by Mr. Boothroyd, the audience dispersed wishing Rev. and Mrs. Boothroyd continued success in their new field. Previous to the occasion, and at the different appointments of the charge Mr. Boothroyd was waited upon by the Young People's Society, Bands and Missionary Societies and presented with gifts and addresses in appreciation of their valued leadership. The following is the address. Hunter River, P. E. I. June 29, 1936.

Rev. F. E. Boothroyd Dear Sir and Pastor. We, a company of people with whom you have been on very intimate terms for the past five years, meet and greet you on this special occasion, to make known to you in a humble way our sincere appreciation of your untiring efforts on our behalf.

In the pulpit you have expounded the Gospel truth in such a way that it was always a great joy to be present and listen to the old story of "Jesus and His Love." At the different appointments you have evangelized services and by your special zeal for the kingdom many joined up for service for the "King of Kings" Life and Life's work for any of us require courage, you have shown us that courage by inspiring hope in a man, hope for his friends and hope for the future. We shall miss your genial presence from our social gatherings. By your special efforts you have organized four well established Young People's Society, all of which are doing splendid work for the church.

To you, Mrs. Boothroyd, you are deeply sensible of the wonderful work you have done, we thank you for that labor of love. As you both take up your life's work in the neighboring provinces may you always remember that our very best wishes go with you. We pray that God will crown your efforts with success. Kindly accept this gift as a token of our love and respect for you. Signed on behalf of members and adherents of Hunter River Charge, United Church of Canada. E. M. Easter, Secy, of official Board
