Anyone interested in natural history will enjoy the up-coming issue of the Island Magazine which reflects a commitment to publish more natural history articles. "An Infinite Number of Woodpigeons" by Geoff Hogan describes the first recorded sighting of passenger pigeons by Jacques Cartier in 1534 and follows this bird's decline through to extinction. The magazine's cover has a magnificent illustration of this bird by John Burden.

Issue #16 also has a book review by Dr. Ian MacQuarrie of the newly published Atlantic Wildflowers by D. Griffin, W. Barrett and Ann MacKay.

Look for it by mid-December at the reasonable price of \$3.50.
