

Prof revives course in Quantitative Socialism

By Michael Zinck

Although a member of the Department of Capitalism, and educated at the Queens University, Professor Mason-Jar remains true to his roots of Quantitative Socialism.

Professor Mason-Jar says he has shunned his family's capitalist ways and left behind it bourgeoisie trappings, which included a controlling interest in the Mason-Dixon Line in the United States.

Today Professor Mason-Jar teaches true Quantitative Socialism to eager students at the Institute of Consciousness Studis of the UPEI Academy of Sciences.

Professor Mason-Jar recognizes that it has not been always so easy to deliver the light of Quantitative realism to the more progressive patriotic students at UPEI.

This was due, Professor Mason-Jar says, "to the extremely complicated domestic political stituation, (especially between 1979 and 1983), created by an official campaign of repression against Quantitative Socialists and other progressives."

However, with the rise to power of the Party and its great leader Cobbnits-II-Sung, the people had made great strides in Quantitative Socialist construction, Professor Mason-Jar believes.

This year marks the first year of the liberation of the university and the founding of the Party, and its great leader, Cobbnits-II-Sung.

Professor Mason-Jar stated that Quantitative Socialism

had suffered greatly under the blows of the former repressive regime.

The undisguised interference of the former Student Council and other reactionary forces was designed to force Quantitative Socialism to become "Quantitative Me-

thods." This was in order that it might be used to oppress and exploit the vanguard of the working class and so attack the entire progressive patriotic student movement and force it into accepting a policy of provocation and aggressive ven-

tures. Now, however, with the abolition of the present autocratic regime, the way has been cleared, Professor Mason-Jar says, "for the completion of the pressing tasks dictated by the interests of the progressive patriotic

students, and the meeting of their aspirations for freedom, democracy and social progress under the guidance of our great leader Cobbnits-II-Sung and the ways of Quantitative Socialism."

The struggle continues, but with the patriotic work of

Professor Mason-Jar, the end will soon come to the exploitation of man by man, and class domination and oppression in any form.

FORWARD TO FREEDOM IN THE GUIDING LIGHT OF QUANTITATIVE SOCIALISM!

Beattie robbed of rubber raft title

Outrageous antics and exciting rafting were the measure of the day as competing schools from across the Atlantic Provinces assembled last weekend at Victoria Park in desperate and sometimes unethical attempts to win a rafting race.

Howard Beattie, Vice-President Internal of the UPEI Student Union and UPEI's entry, was embroiled in a controversy with rafting executives concerning the outcome of the race.

Apparently Bob Stanley, who has been haunting Beattie for the past few months for a position on the team, disguised himself as a sperm whale and took a big bite out of Beattie's paddle.

Beattie was making his final strokes and was way ahead of the pack when the incident occurred.

Beattie launched a formal complaint to the governing body of rubber rafting, but it looks as though "Otis" is up the creek without a paddle.

The winner of the regional race would advance to the Nationals this weekend, and as of press time late Tuesday

night, no confirmation from the racing body was an-

nounced. It is just another chapter

in the UPEI Failure Book as another team ultimately fails

to bring recognition to our less than glorious university.

The Student Union entry on its way to victory before Stanley makes his chop. Left to right, Beattie, Donay, Mutton, Smith.

A dedication to Brian Link,
Without his "Staple" cartoon we would stink.
He leaves us in stitches of laughter,
We can't wait to read his next chapter.
An artistic hand is his the best.
He adds to the Gem both style and zest.
Ideas flow from the heart
To his finger to tips, and that's just a start.
He's quick
To wit
And his mind is in high gear,
Even though he's an engineer.
But when all is said and done we think
That we have found our missing Link.
A Jonathan Orlowski creation

A Stale Point of View

By Kaberi Dasgupta

It's over. Well, it's almost over. My first year of university has been condensed in my scrapbook and tucked away

into the drawer. All right, not yet. It will be once I cut out this article.

I suppose that it is now time to find my Kleenex box and become engulfed in

sentimentality, to weep over "the days that are no more." I may, three years from now. Then again

The logical question to now ask, "What have I learned during my first year of university that distinguishes me from that innocent soul who attended Freshman initiation in new clothes?"

Well. Let me ponder this question for a minute.

Well, I think I have learned a sufficient number of theorems and formulase to take me to the borders of insanity. I have learned that three hundred consecutive dots do not qualify as an ellipsis. I now appreciate the experience of slitting open a rat. I can even quote Tennyson,

(Note second paragraph. I am programmed to attempt humor — almost — once a week. The 'almost' modifies 'once a week', not 'humor'.)

And now the more humbling question. What do I have left to learn? Perhaps a few more formulae to completely push me across the border. I may need to learn how to dissect something more endearing than a rate. And yes, I suppose I should learn how to type my own articles.

This is it. It is over. The last "Fresh Point of View" — from me anyway. From now on, I will be a stale academic. Wait a minute — what about next year? How about the "The Sopht Spot"? (ouch).
