

RC church aids Latin Americans

By JACK VAN DUSEN
OTTAWA (FP)—Affable Rev. Francis O'Grady has 200,000 problems—all of them people. They are the inhabitants of Latin America, whom the 46-year-old Ottawa has taken under his wing as head of the Latin American office set up here two years ago by the Canadian hierarchy of the Roman Catholic Church.

The office has provided \$33,000 in scholarships for education of Latin Americans in Canada and is building a \$300,000 seminary at Tegucigalpa, Honduras.

Twenty took special courses on social leadership, co-operatives and credit unions during the 1961-62 term at the Coady International Institute of St. Francis Xavier University, Antigonish, N.S.

Another 39 are in Canadian seminaries studying to become priests.

The church has about 325 Canadian priests, nuns and lay teachers in Latin America.

"There should be 5,000," says Father O'Grady. "But the Canadian church, with only 7,000,000 to 8,000,000 Catholics, can't expect to solve the problems of 200,000,000 and the Latins are the first to realize this."

"What we're trying to do is assist in an area of endeavor where the Canadian impact can be felt."

Cancer specialists meet in Moscow

By FRANK CAREY
MOSCOW (AP)—Development of a new "radial balloon" technique for diagnosing stomach cancer was reported today by an American surgeon as the world's largest gathering of cancer fighters opened technical sessions.

Dr. Norman B. Ackerman of the University of Minnesota Medical School described the diagnostic technique to the Eighth International Cancer Congress meeting at Moscow University.

A patient suspected of having stomach cancer is first given a small dose of radioactive phosphorus—a kind of radioactive cocktail. This particular isotope is known to be absorbed more by cancer tissue than by normal tissue, so it can be used as a tracer of cancer.

Then a thick-walled rubber balloon, coated with a latex-base emulsion sensitive to light and to other forms of radiation, is passed into the patient's stomach. The balloon is then inflated with air so that it fills the stomach cavity.

Rays from the radioactive phosphorus strike the balloon and make streaks on the emulsion lining, just as light affects a photographic film.

STUDY PATTERN
 The balloon is deflated and withdrawn from the patient's

Economic picture in U.S. said spotty

NEW YORK (AP)—The U.S. economic picture was spotty this week.

Above all hung the question of whether President Kennedy will ask congress for an income tax reduction to pump additional money into the economic stream.

A three week advance by the stock market was interrupted and some experts put

Helicopter answers problems

VANCOUVER (CP)—In British Columbia they've found another use for the helicopter.

Stuck recently with the job of repairing a string of telephone poles in rough, rocky terrain, B.C. Telephone Company called in a whirlybird.

Within a couple of days, an Okanagan Helicopters Limited Sikorsky had moved 27 poles, covering over a mile-long stretch, saving an estimated \$5,000 to \$8,000, not counting labor costs.

A few weeks later, 80 power line consultants and contractors watched a similar feat at a power substation near Vancouver. Two 65-foot poles, each weighing 2,700 pounds, were plucked off the ground, flown to the site and dropped neatly into place. Then a 25-foot cross-arm was lowered across the top of the upright poles as easily as a housewife threads a needle.

Okanagan Helicopters officials have ordered a special study of new uses for their fleet said to be the world's largest.

Among projects already in sight are the transport of five-ton houseboats from one construction site to another and the transport of logs and logging crews in and out of timber sites to eliminate the costly business of cutting roads.
