

STOCK QUOTATIONS

Morning Stock Letter

(Received over Pittfield and Co's Private Wire) NEW YORK, April 27—President Roosevelt's speech on Saturday night merely repeated his philosophies of politics and business. French elections were about in line with expectations with the decided trend to the left. Paris market is lower this morning but trend of market is irregular. Supreme Court meets at noon today. Freeport Texas for the first quarter reported 61 cents against 22 cents. International Printing Ink reported 54 cents against 48 cents. General refractories 51 cents against 50 cents. Week end news could hardly be construed as favorable and probably will provide some test for the market, consequently we would look on the first thing this morning. The ability of the industrialists to hold above last week's lows will be helpful.

NEW YORK, April 27—Several weeks ago the stock market went stale. Many reasons may be advanced for this action but the main reason is the market itself. It had advanced for a long time with very little in the way of reaction and was somewhat overbought although accounts were in a good state. From this staleness the market has now suffered a fairly severe setback and some rally from the lows without much significance being attached to such movement. We are inclined to expect some irregularity to prevail for a time longer with perhaps the lows of last week being tested. However, this setback is not a fundamental change in the market. It is we believe, simply a setback in a bull market and that in time the upward swing will be re-established, probably during the month of May.

LIVESTOCK

(Canadian Press) MONTREAL, April 27—Cattle trading was fairly active at prices that were steady to 25 cents higher on Montreal livestock markets today. Due to light offering trading in calves was active in steady prices. Sheep were 50 cents lower and hogs showed no change. Receipts: Cattle, 901; calves, 644; sheep, 224; hogs, 1443. Good steers sold at \$5.75 to \$6.00 and medium for \$4.50 to \$5.50, common going for \$4.00 to \$4.25. Heifers ranged between \$3.00 and \$5.10, the latter price being picked up for the export trade. Good cows were \$4.00 to \$4.25 and medium from \$3.25 to \$3.75. Canners and cutters sold for \$2.00 to \$2.50. Good veals brought \$5.00 to \$5.50 with fair kinds from \$4.75 to \$5.00 and common kinds from \$3.50 to \$4.50. A few grassers sold for \$3.00. A few medium good to good quality spring lambs sold for \$5.00 to \$7.00 but common kinds went at \$3.00 to \$4.00 each. Sheep sold for \$3.00 to \$5.00 with the bulk between \$4.00 and \$4.50. Bacon hogs, fed and watered, fetched \$9.00 and select drew a \$1 premium. Butchers and hewies were \$8.50 and sows \$8.40 to \$7.00.

Markets At A Glance

(Canadian Press) Toronto and Montreal—Industrial stocks sharply lower. Toronto Mines—Lower. New York—Stocks; record heavy losses. Winnipeg—Wheat down 2 to 1 3-4 cents. New York—Cotton lower; sugar unchanged.

Currencies

(Canadian Press) NEW YORK, April 27—The Canadian dollar today gained 5-32 cent on the foreign exchange market, closing at 99 11-16 cents in terms of United States funds. The pound sterling at \$4.93 3-4 was unchanged while the French gold franc advanced 00 1-8 cent to 65.8 1-2 cents. MONTREAL, April 27—Loss of a cent was registered today on Montreal foreign exchanges by pound sterling at \$4.95. The United States dollar dipped 5-32 cent to 92.32 premium while the French franc was off .01 cent at 65.00 cents.

GRAIN

(Canadian Press) WINNIPEG, April 27—More than 2,000,000 bushels of Canadian wheat were sold for export today but this failed to offset bearish influence on Winnipeg grain exchange of drought-breaking rains in the south-west. Futures prices were 2 to 1 3-4 cents lower at the close of an active session, May at 79 3-4, July 8-8 to 3-4 and October 81 7-8 to 82 cents. Heavy selling marked trading throughout with operations in good volume. A week-end of rain in the United States winter-wheat belt—the chief market factor in recent weeks—brought out the selling. Prices broke sharply at the start and recurring selling flurries wiped out each fractional recovery. Cash grains spreads showed little change, while prices in the coarse grains markets dipped with wheat. Traff' Policemen (overtaking speed hog)—Didn't you hear me yelling for you to stop? Motorist—Was that you? I'm sorry; I thought it was only someone I'd run over.

Mosquito Control In Canada

Now is the time to complete plans and arrangements to combat the mosquito pest. Myriads of tiny eggs of these voracious insects are lying in low places in fields and woodlands where they were deposited by the female mosquitoes during the summer months. When the spring sunshine melts the snow, pools will form, and these eggs will hatch, giving rise to the small mosquito larvae or "wigglers" which later transform into the pupae from which the winged adults emerge, and seek out man and animals to suck their blood. When this happens it is too late to do much about it except swat and curse. The time to attack mosquitoes is before they emerge from the water. To kill them then is a comparatively simple matter and is based on the fact that mosquito larvae and pupae breathe air through tube-shaped organs which they apply to the water surface. A thin film of oil spread on the water, quickly and effectively destroys them. Petroleum oils are used for this purpose; a light fuel oil is probably most suitable, but other oils such as kerosene or crude oil, providing they spread satisfactorily on the water, are effective. Portable compressed air sprayers may be used to apply the oil, or even garden watering cans, although the latter are rather wasteful. The treatment should be given in late April or early May. Even more important than spraying, which is purely a temporary measure, is the matter of permanent control by eliminating breeding places. This may be done by draining and filling low places, cleaning out ditches, removing brush from waste land subject to flooding, and similar means. Mosquitoes, like warbles and bots of cattle and horses, are dealt with most successfully on an organized community basis. The reason for this is that the breeding places of mosquitoes are usually scattered over a wide area. Individual effort is worthwhile, but results from it may be offset to some extent by the migration of mosquitoes from untreated places elsewhere in the vicinity. A number of communities in various parts of Canada have taken organized action against the mosquito nuisance and have secured excellent results at very low cost. It is no longer necessary to tolerate these annoying pests; community action solves the problem. Information and direction as to how to conduct community campaigns may be obtained by writing the Dominion Entomologist, Dominion Department of Agriculture.

House Fly Is Public Enemy

With the advent of Spring comes the menace of the house fly—which may correctly be termed Public Enemy No. 1. It is worldwide in distribution and is notorious in spreading such serious diseases as typhoid fever, tuberculosis, cholera, dysentery, infantile diarrhoea, and other dangerous epidemics. The fly breeds in filth; infects itself with filth; carries germs of filth and disease on its legs and body and in its intestines; and with these germs pollutes food, especially milk, one of the principal nutritional items in the establishment of the human race. It is known that a single fly can carry as many as five hundred million germs on and inside its body, but until there is active cooperation on the part of entire communities, including the municipal authorities and every single individual in the community, to remove filth, the main source of fly-production, the menace of the fly to human life will remain. The most effective and desirable method of controlling the house fly undoubtedly consists in eliminating or reducing its breeding places to a minimum by properly treating or disposing of such materials as manure and garbage. The house fly breeds in such decaying and fermenting matter as kitchen refuse and garbage. Garbage receptacles should be kept tightly covered and where possible all re-use should be burned or buried at once or without undue delay. If it cannot be dispensed with, refuse should never be left exposed but sprinkled with powdered borax or chloride of lime. Windows and doors of houses, particularly those of the dining room and kitchen, should be screened and all flies that gain entrance destroyed. This may be done by the use of swatters, by tangle-foot strips, or by using a fly spray. Milk and other food should be screened in the summer by covering it with muslin and fruit should also be covered. On no account should flies be permitted in a sick room, and the faces of sleeping babies, or babies lying unattended in their cots or cradles, should be screened with muslin. An effective poison bait, but one which cannot be used where children are exploring or romping about, is made by exposing in saucers a mixture of one teaspoonful of formalin in a cupful of sweetened milk or water. Fly sprays, of course, operate best in closed spaces, and the dead or paralyzed flies should be swept up and burned, or thrown into very hot water to prevent any from recovering.

Rabbits and Mice Damage Orchards

Considerable damage to fruit trees by mice and rabbits is reported from various parts of Ontario, and, as has formerly happened after a heavy fall of snow, damage from rabbits has been almost uncontrollable, as they have been able to stand on top of the snow and nibble at the branches of the young trees. However, although the gnawing of trees by rodents is one of the greatest hazards in the growing of a young orchard, it is a hazard that under ordinary circumstances may be eliminated. Against mice, protection of trees may be accomplished in two ways. (1) by the use of building paper, and (2) by the use of wire or metal protectors. The building paper is a very cheap means of protection so far as the material is concerned but it monopolizes a great deal of time through the necessity of wrapping the trees each fall. Single-ply white or grey paper is used. Tar paper may be employed, but it is not recommended by leading orchardists as there is a possibility of injury to the trees. Cut into strips about six or eight inches wide to the full length of the roll, the paper is wrapped snugly around the trunk of the tree and tied with binder twine top and bottom. A little earth is mounded up around the base to prevent the rodents working under the paper. The use of wire or metal as a protection is more permanent, more expensive in material, but cheaper in labour, for the metal protectors last for a period of years. As a protection against rabbits after a heavy fall of snow, building paper is used. The use of wire or metal as a protection is more permanent, more expensive in material, but cheaper in labour, for the metal protectors last for a period of years. As a protection against rabbits after a heavy fall of snow, building paper is used. The use of wire or metal as a protection is more permanent, more expensive in material, but cheaper in labour, for the metal protectors last for a period of years. As a protection against rabbits after a heavy fall of snow, building paper is used.

Moose Caller Aided In Mine Rescue

MOOSE RIVER, N.S., April 27—(C.P.)—A voice trained to call the moose in Nova Scotia forests was useful to rescue workers while Dr. D. E. Robertson and Alfred Scadding were entombed in the gold mine here. For four days before the men were reached they talked to the surface over a telephone line dropped down a diamond drill hole. What they said was heard distinctly on the one-way receiver, but answers had to be shouted and tapped from above, and one after another the telephone operators lost their voices. Then came Roy Best, a guide, whose rich, powerful voice carried so well down the drill hole and into the pit that he was kept on the job for two days and two nights.

Success Women's Institute

Mrs. Bert MacKay entertained the members of Success W.I. Graham Road at her home on April 21st. Meeting opened in the usual manner with the president presiding. Minutes of last meeting were read and adopted. Roll call was responded to by eleven members with "A Book I Have Read from Carnegie Library." The business of the meeting was then taken up. Mrs. Hugh Campbell reported work done about the play. It was moved and seconded that a bill of \$1.82 be paid. The questionnaire on Education and Better Schools was discussed and filled in by Miss May MacGregor. Mrs. John MacGregor read an interesting item from Institute News. Program committee for next meeting are: Mrs. Earle Murray, Mrs. Bert MacKay, Mrs. John MacGregor, Mrs. J. M. Campbell and Mrs. Francis Murray. Collection amounted to 60c. Miss May MacGregor invited the members to her home for the next meeting, roll call to be answered by a Garden or Poultry Hint. Meeting adjourned. A dainty luncheon was served by the hostess assisted by Miss Evelyn Brown.

Little Toddler Is Drowned

GLACE BAY, N.S., April 27—(C.P.)—Toddling off alone from the home of his parents, two-year old Jackie Ferguson fell into a nearby pond today and was drowned. An uncle, Mike Meachen, found the body.

PRODUCE

(Canadian Press) MONTREAL, April 27—Butter displayed an uncertain and easier trend on Montreal open produce markets today, while eggs formed a little. Other lines were about even. In light demand, butter was quoted at 20 3-4 cents per pound for carlots or less of no 1 white lot; to retailers were 22 for solids and 22 1-2 to 23 for prints. Graded egg shipments were 21 cents a dozen for a large, 19 for a medium, 18 1-2 for B, and 17 1-2 for C. Cheese again was nominally
