

NEWLY ELECTED EDUCATION SOCIETY EXEC.

The Education Society elected its new officers for 1978-79 on October 4th of this year. The president of the class is Claudia Batchilder, who is in the one year Bachelor of Education program; vice-president, Donna Mundle, who is a junior in the four year Bachelor of Education program; secretary-treasurer, Evelyn Vloet, who is in the one year Bachelor of Education program; one-year representative is Heather Stevenson and the final member of the executive is Sandra Morrison, the four-year representative, who is in her last year.

We, as the executive, hope that any Education student who has any suggestions will offer them to us, since most of the executive members are beginners in this area and we will certainly appreciate any help you want to give.

To begin the year rolling, our first major event involved the Outdoor Education weekend. For all who were concerned the short weekend was a real success. It provided a chance for us to find out a little more about each other as individuals. Approximately thirty people came together as a group to learn a little about Outdoor Education. The event was held at the Oak Acres camp near Murray River. The main idea of the weekend was to involve us in the out-of-doors and by so doing we were introduced to the different ways we can use this facility to teach students. Basically we learned a little of what surrounds us from day to day - nature.

Through one of the nature walks which was held at night we were able to use our senses to find our way around; for example, we could use our sense of smell in the woods and along the shore of the river. Most of us noticed that our feet became rather unsure of themselves, so that we carefully proceeded rather than instinctively moved forward through the woods at night. We also listened for sounds and took a

look at the stars in the sky since it was a beautiful clear night.

During the following day we engaged in the same sort of walk -- along the shore and in the woods. Our final learning experience involved the use of compasses. The outdoor educationalists call this orienteering. We learned that with compass and map we could find a plotted route, which the resource

people kindly let us find out, by letting us practice one in the Oak Acres camp area.

We would like to thank the resource people for the weekend. These people included Don Norman, Department of Education; Gordon MacInnis, Principal of Elliot River School; Andre LaVoie, Department of Environment, and Frank Gaudet, Department of Agriculture.

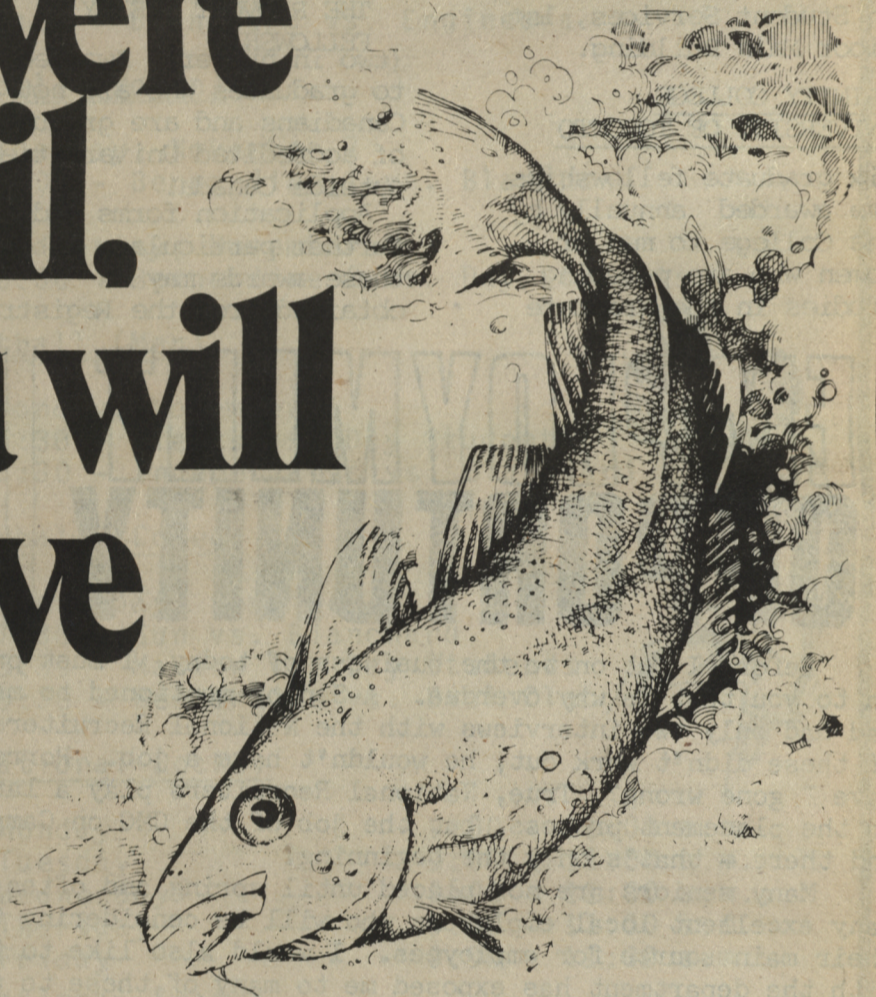

If it had not been for the superb cook, we may not have survived the weekend. So we thank Mrs.

Evelyn Gaudet for the delicious and inexpensive meal. Also we cannot forget the Faculty of Education for providing such a weekend.

Evelyn Vloet

Secretary-Treasurer
Education Society

When we're out of oil, Canada will still have the sea

The 200-mile fisheries management zone has given Canada the opportunity to become the number one fish exporter in the world. For the country as a whole, this could mean a growing resource industry that could provide the sort of economic stimulation that has come from other resource industries like petroleum and mining.

Compared to most of these other resource industries, fishing has the advantage of being renewable. Oil wells and mines are eventually exhausted. A well managed fishery resource grows.

For Atlantic Canada, the fishery opportunity could mean thousands of additional jobs in the fishing industry. For other companies that service and supply the fishing industry, the opportunity could mean more work. Taking full advantage of the opportunity involves a number of complex considerations and policies. One consideration is the need for a reasonable balance between the inshore fishery and the offshore fishery. The existence of both is essential. There is room for expansion in both the inshore and offshore sectors.

Policies that recognize the need for this balance, and that recognize that competing internationally requires size, expertise, technology, financial resources and continuity of supply throughout the year, are essential to taking advantage of the opportunity.

There is a time limit.

If Canada does not move quickly to develop the vessel technology and expertise required to catch more fish within our jurisdiction, we will continue to see a large foreign fishing fleet in our waters -- perhaps for all time.

The opportunity will be lost.

As interested and concerned organizations involved in fishing, H.B. Nickerson & Sons Limited and National Sea Products Ltd., would like Canadians to know more about our industry and the important economic opportunity it offers. This message is one in a series aimed at providing that information. For additional information, please write to the Post Office box number that appears below.
