Angered LBJ Calmed, Is Pearson's Report

OTTAWA (CP)—Prime Minister Pearson said here today when he met President Johnson earlier this month "we had an argument of course" but "when I left him he certainly wasn't mad."

This was Mr. Pearson's first reference to an argument during his two-hour visit with the president at his Camp David, Md., presidential retreat.

The talks were held a day after the prime minister told a Philadelphia audience that the U.S. might take a "pause" in its bombing of North Viet Nam "at the right time."

He also suggested a massive aid program to Southeast Asia—a proposal advanced by Mr. Johnson five days later.

Various newspaper reports from the United States have said that Mr. Johnson "resented" or was "angry" over Mr. Pearson's Philadelphia speech. The president was in a "leasty mood" when he met the press after the talks, but spokesmen at Camp David attributed this to Mr. Johnson's annoyance with photographers. The two men appeared to be in good humor when reporters first arrived.

Ore Sorting Method Uses Electronics

OTTAWA (CP)—A mines department research team has developed an electronic method of sorting ores containing heavy elements, the department announced here.

Although the system has yet to be tested in the field, it already has been used in a practical ore sorter.

Its major use is expected to be in sorting ores containing molybdenum, tin, caesium, mercury and lead, but it can sort any "heavy" element with an atomic number greater than 35. This means it would not be used for copper, iron, silicon and Beryllium ore.

The device developed by Dr. R. H. Goodman, C. A. Josling and A. H. Bettens of the mineral sciences division here uses readily available electronic equipment.

The ore is bombarded with radiation from an artificially produced strontium 90, causing the ore to produce x-ray characteristics of the elements present in the ore.

By detecting x-rays generated by desired elements, the ore may be sorted as being acceptable grade or waste.

For example, in the case of molybdenum, an element added to high-grade steel to make it heat-resistant for such items as high-speed drill bits, the device can sort ore containing one-tenth of one per cent molybdenum. Although this concentration is uneconomical for present refining methods, the sorter can be set to detect only stronger concentrations and reject the remainder as waste.

Although this will not change the actual recovery process, it is expected to reduce recovery costs as the cost of milling reagents used is based on the amount of ore handled, not the amount of the element recovered.

As the sorter would handle small chunks of ore from the primary crusher at a mine, it would lead to substantial increases in production efficiency. A mining engineer said the system probably would not be practical for gold or silver recovery as these elements are found in such small quantities. But it would be a big help in other mining operations, molybdenum especially.

At present, only visual means are used for sorting ore before milling.

The bidding: East South West North Pass 2♥ Pass 3♠ Pass 4♥ Pass 4NT Pass 5♠

The one baffling bid in this sequence was South's leap to six diamonds in response to what was apparently a Blackwood bid. Whatever its meaning, and however North interpreted it, the British pair managed to stop at six, which was as high as they belonged, looking at only the North-South cards.

They scored 1,430 points on the deal to bring the British a net gain of 1,530 points on the deal (19 IMPs). With the East and West hands interchanged, the British team would have lost 750 points on the deal (13 IMPs).

The location of one card made an enormous difference on the hand, but it had no bearing on the outcome of the match, which the United States eventually won.

Opening lead—seven of hearts.

The biggest swing of the 144-hand match between Great Britain and the United States in 1962 occurred in this hand, No. 44.

The bidding went as shown when Charles Coon and Eric Murray held the North-South cards for the American team.

The grand slam contract they reached was moderately acceptable, since the outcome depended largely on whether East or West had the king of spades. With West having the king, Murray had to go down one by a score of minus 100 points.

Had the East-West cards been reversed, Murray would have

DAILY CRYPTOQUOTE

Here's how to work it: **AXYDLBAAXE & LONGFELLOW**

One letter simply stands for another. In this sample A is used for the three L's, X for the two O's, etc. Single letters are apostrophes, the length and formation of the words are all hints. Each day the code letters are different.
