be mailed free of postage, on receipt of the money, by
addressing
MACK'S MAGNETIC MEDICINE CO.,
Windsor, Ont., Canada.
Agents for Prince Edward Island, and by all Druggists
everywhere.

CORRESPONDENCE.

We do not hold ourselves responsible for the
opinions or statements of our correspondents.

To the Editor of the Examiner.
SIR.—My attention has just been called
to a communication in a late number of
your paper, stating that a train hand had
taken some trout out of Morell River,
and reflecting on the inefficiency of the Ward-
en's supervision. Now, I beg to state, in
the most emphatic manner, that the river
has never been better watched; but the
Warden being in Charlottetown, the said
train hand saw him there, and took advan-
tage of his absence to commit the depreda-
tion. It is a rather a difficult matter to
detect the said poacher as he is an old hand
at the business, in proof of which I may
state that his nets were seized by a warden
some two years previously. He has also
this advantage to assist him, in developing
his poaching propensities—he can take the
train to Morell, where some of his friends
who are in the fishing business can supply
him with all the appliances to carry on his
nefarious business.
In conclusion, I may say that your cor-
respondent, in all probability, is a hungry,
greedy office-seeker, who was an accomplice
after, if not before, the act.
Yours respectfully,
A WARDEN.

Morell, June 19, 1882.

Military.

PROVINCE OF PRINCE EDWARD ISLAND.
Prince Edward Island Provisional Brigade
of Garrison Artillery.

1 Company, 82nd Battalion.
The above confirmations of rank to date
from 27th April, 1882.

BOARD OF EXAMINERS.

PROVINCE OF PRINCE EDWARD ISLAND.
SECOND CLASS CERTIFICATES.
Captain Thomas Ives, Prince County
Prov. Battalion.
Lieutenant Isaac Henderson, 82nd Bat-
talion.
2nd Lieutenant Daniel Stewart, 82nd
Battalion.
2nd Lieutenant William Scott, 82nd Bat-
talion.

Death of a British Vice-Admiral.

Vice Admiral Robert Hall, C. B., Naval
Secretary of the Admiralty, is dead. He
was a native of Kingston, Ontario, and was
born in 1817. He entered the Royal Navy
in 1833, and has served almost continually
ever since. Attaining, by gradual promo-
tion, the rank of Commander. He com-
manded H. M. steamship "Stronacholm,"
and was engaged in the operations which
resulted in the capture of Bomarsund; and
afterwards, when attached to the Black Sea
fleet, in the operations before Sebastopol
and the blockade of Odessa, and was acting
Captain of the "Hodbold" at the taking of
Kertch. He served in command of a squad-
ron in the straits of Kertch, and was in
command of the naval portion of a com-
bined expedition which captured and de-
stroyed the fort establishments at Taman.
After the conclusion of the war he was sent
to the coast of Albania to protect the Chris-
tians in that province, whose lives were in
danger from the fanaticism of the Turks.
In 1871 he became third Lord of the Ad-
miralty, and Comptroller of the Navy,
which appointment he relinquished in 1872
on becoming Naval Secretary to the Ad-
miralty. He was Naval Aide-de-Camp to
the Queen from 1870 to 1872.

The Medical College of the University of
California turns out graduates to prey upon
the public with more than ordinary indif-
ference to their qualification. One student is
mentioned, of whom we are told that
"having wholly failed in his examination, a
large majority of the faculty desired to give
him his diploma notwithstanding, because
his family had been reduced to poverty by
the war," and on Dr. Martinache refusing
to be a party to the proceeding, the young
man was called in and asked: "If they gave
him his diploma now, would he promise to
study when he got home? Dr. Martinache
pointed out the absurdity of asking such a
promise from a man who, having the in-
centive before him of obtaining his diploma
had yet failed to study enough to earn it.
But it was of no use, and the really lea-
ned Dr. Martinache was overruled.

If Mr. Keely has a motor, the secret of
it will soon be known, if he keeps his pri-
vacy to apply for patents for his inventions.
The stockholders of the Motor Company
are said to be greatly pleased with this in-
telligence. It is remarkable that Mr.
Keely was able to form a company with-
out imparting his secret to any of his stock-
holders, but the fact shows that there is an
abiding public faith in the possibilities of
inventive genius.
LADIES' English Kid Walking Boots, Slip-
pers and Shoes. A few pairs just opened at
the London House. [June 3, 82]

The High Commissionership.

The rumour is again revived that Sir
A. T. Galt will not return to England
as High Commissioner for Canada, and
that the Hon. D. L. Macpherson and not
Sir Leonard Tilley, as was at first re-
ported, will succeed him. The office is
the best one in the gift of the Dominion
Government, as it carries position and
the highest salary, after the Governor-
General's, paid by the people of this
country. Mr. Macpherson is a gentle-
man of very great ability, large means,
and commanding presence. He writes
and speaks well, and we have no doubt
but that if appointed, he would make an
excellent representative of our interests
in England. The salary is a large one
for Canada to pay, but as a matter of
fact, it is a very small one for a man
holding the position of High Commis-
sioner to receive. No one can live in
England in the style commensurate with
the dignity of the office, on that sum, and
consequently it stands to reason that the
future Commissioner must be a man of
means and good social position, other-
wise the office will be worse than a white
elephant to him. Mr. Macpherson is
well equipped in these respects, and we
feel sure that his appointment would be
most acceptable to the people.

Without Capital.

It is bad beginning business without
capital. It is hard marketing with empty
pockets. We want a nest-egg for hens
will lay where there are eggs already.
It is true you must bake with the flour
you have, but if the sack is empty, it
might be quite as well not to set up for
a baker. Making bricks without straw
is easy enough, compared with making
money when you have none to start
with. You, young gentleman, stay as a
journeyman a little longer, till you have
saved a few pounds; fly when your
wings have got feathers; but if you try
it too soon, you will be like the young
rook that broke its neck through trying
to fly before it was fledged. Every
minnow wants to be a whale, but it is
prudent to be a little fish while you have
but little water; when your pond becomes
the sea, then swell as much as you like.
Trading without capital is like building
a house without bricks, making a fire
without sticks, burning candles without
wicks; it leads men into tricks, and lands
them in a fix.

About the Sun.

Particularly impressive are the facts and
examples by which Professor Young en-
deavors to convey to the reader some idea
of the prodigious forces and activities with
which the student of the sun is confronted.
Speaking of the outflow of the solar heat,
he says:

"The quantity of heat emitted is enough
to melt a shell of ice ten inches thick over
the whole surface of the sun every second
of time; this is equivalent to the consumption
of a layer of the best anthracite coal
nearly four inches thick every single second
in regard to the distance of the sun from
the earth, he says: "Though the distance
can easily be stated in figures, it is not
possible to give any real idea of a space so
enormous; it is quite beyond our power of
conception. If one were to try to walk
such a distance, supposing that he could
walk four miles an hour, and keep it up for ten
hours every day it would take sixty-eight and
a half years to make a single million of
miles and more than sixty three hundred
years to traverse the whole. If some cele-
stial railway could be imagined, the journey
to the sun, even if our trains ran sixty
miles an hour, day and night without a
stop, would require over one hundred and
twenty-five years. Suggestion, even, would
not travel so far in a human lifetime. To
borrow the curious illustration of Professor
Mendenhall, if we could imagine an infant
with an arm long enough to enable him to
touch the sun and burn himself, he would
die of old age before the pain would
reach him, since, according to the experi-
ments of Helmholtz and others,
a nervous shock is communicated
only at the rate of about one hundred feet
per second, or sixteen hundred and thirty-
seven miles a day, and would need more
than one hundred and fifty years to make
the journey. Sound would do it in about
fourteen years if it could be transmitted
through celestial space; and a cannon-ball
in about nine, if it were to move uniformly
with the same speed as when it left the
muzzle of the gun. If the earth could be
suddenly stopped in her orbit, and allowed
to fall unobstructed toward the sun, under
the accelerating influence of his attraction,
she would reach the centre in about four
months."
As to the attraction between the sun and
earth: "It amounts to thirty-six hundred
quadrillion of tons—in figures, 36 followed
by seventeen ciphers. . . . We may im-
agine gravitation to cease, and to be
replaced by a material bond of some sort,
holding the earth to the sun and keeping
her in her orbit. If, now, we suppose this
connection to consist of a web of steel
wires, each as large as the heaviest tele-
graph wires (No. 4), then to replace the
sun's attraction these wires would have to
cover the whole sunward hemisphere of our
globe about as thickly as blades of grass
upon a lawn. It would require nine to
each square inch."
THE man who revenges every wrong that is
done him has no time for anything else. If
you make your life a success, you can afford
to let the dogs bark as you go by.
