FOUL PLAY. By Charles Reade. CHAPTER XXXIV. (Continued.) It was a plentiful repast, and included roast pintado and cabbage-palm. Helen Rolleston informed him during dinner that he would no longer be allowed to monopolize the labor attending their condition. 'No,' said she, 'you are always working for me, and I shall work for you. Cooking and washing are a woman's work, not a man's; and so are plaiting and netting.' This healthy resolution once formed, was adhered to with a constancy that belonged to the girl's character. The roof of the ruined hut came ashore in the bay that evening, and was fastened over the boat. Hazel lit a bonfire in the cavern, and had the satisfaction of seeing some of the smoke issuing above. But he would not let Miss Rolleston occupy it yet. He shifted her things to the boat, and slept in the cave himself. However, he lost no time in laying down a great hearth, and built a fire-place and chimney in the cave. The chimney went up to the hole in the arch of the cave; then came the stone funnel, stolen from Nature; and above, on the upper surface of the cliff, came the chimney-pot. Thus the chimney acted like a German stove, it stood in the centre, and soon made the cavern very dry and warm, and a fine retreat during the rains. When it was ready for occupation, Helen said she would sail to it; she would not go by land; that was too tame for her. Hazel had only to comply with her humor, and at high water they got into the boat, and went down the river into the sea with a rush that made Helen wince. He rowed over her across the bay to a point distant not more than fifty yards from the cavern, and installed her. But he never returned to the river; it was an inconvenient place to make excursions from; and besides, all his work now was either in or about the cavern, and that convenient hurricane, as Helen called it, not only made him a builder again; it also made him a carter, a soap boiler, and a salter. So they drew the boat just above the high water mark in a sheltered nook, and he set up his arsenal ashore. In this situation, day glided by after day, and week after week, in vigorous occupations, brightened by social intercourse, and in some degree by the beauty and the friendship of the animals. Of all this industry we can only afford a brief summary. Hazel fixed two uprights at each side of the cavern's mouth, and connected each pair by a beam; a netting laid on these, and covered with gigantic leaves from the prostrate palms, made a sufficient roof in this sheltered spot. On this terrace they could sit even in the rain, and view the sea. Helen cooked in the cave, but served dinner up on this beautiful terrace. So now she had a But and a Ben, as the Scotch say. He got a hog'shead of oil from the sea-lion, and so the cave was always lighted now, and that was a great comfort, and gave them more hours of in-door employment and conversation. The poor bugbear really brightened their existence. Of the same oil, boiled down, and mixed with wood ashes, he made soap, to Helen's great delight. The hide of this animal was so thick he could do nothing with it but cut off pieces to make soles of shoes if required. But the seals were miscellaneous treasures; he contrived with guano and aromatics to curry their skins; of their bladders he made vile parchment, and of their entrails, gut, catgut, and twine, beyond compare. He salted two cubs, and laid the rest up in store, by inclosing large pieces of clay. When these were to be used, the clay was just put into hot embers for some hours, then broken, and the meat eaten with all its juices preserved. Helen cooked, and washed, and manufactured salt, and collected quite a store of wild cotton, though it grew very sparingly, and it cost her hours to find a few pods. And in hunting for it she found other things—health for one. After sunset she was generally employed a couple of hours on matters which occupy the fair in every situation of life. She made herself a seal-skin jacket and a pork-pie hat. She made Mr. Hazel a man's cap of seal-skin with a point. But her great work was with the cotton, which will be described hereafter. However, for two hours after sunset, no more (they rose at peep of day), her physician allowed her to sit and work; which she did, and often smiled, while he sat by and discoursed to her of all the things he had read, and surprised himself by the strength and activity of his memory. He attributed it partly to the air of the island. Nor were his fingers idle even at night. He had tools to sharpen for the morrow, glass to make and polish out a laminated crystal he had found. And then the hurricane had blown away, among many properties, his map; so he had to make another with similar materials. He completed the map in due course, and gave it to Helen. It was open to the same strictures she had passed on the other. Hazel was no cartographer. Yet this time she had nothing but praise for it. How was that? Relieved of other immediate cares, Hazel's mind had time to dwell upon the problem Helen had set him; and one fine day a conviction struck him that he had taken a narrow and puerile view of it, and that, after all, there must be in the nature of things some way to attract ships from a distance. Possessed with this thought, he went to Telegraph Point, abstracted his mind from the external objects, and fixed it on this idea—but came down as he went. He descended by some steps he had cut zig-zag for Helen's use, and as he put his foot on the fifth step, who—whir—whizz—came nine ducks, cooling his head, they whizzed so close, and made right for the lagoons. 'Hum!' thought Hazel: 'I never see you ducks fly in any other direction but that.' This speculation rankled in him all night
