THE ENGINEER'S BI-WEEKLY

It's Coming

November 15th

Novemberfest 90 Featuring Fluid Dynamics

Yes, we are back with another weeks worth of contemporary, award winning prose one side splitting, engineer pleasing humour.

This week the Engineering Society is pleased to announce the addition of a crossword puzzle to our already critically acclaimed page (Yes, yes, I know you are all excited, but we figured that if we added a connect the dots puzzle, you'd wet yourselves).

This week we have added a puzzle specifically in mind for the arts student. considerable time and effort has been put into creating a puzzle that will aid in developing and enhancing our readers minds without worry of them physically injuring themselves.

We have measured the amount of time required to complete the puzzle, so you art students don't worry, if you haven't solved it in the first hour, probably none of your friends (or department, for that matter) have either.

DON'T  
O. D. E.  
(Overdose on Differential Equations)

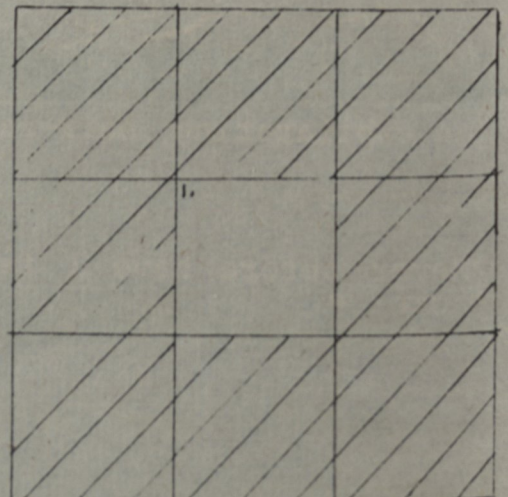

YOUR LIFE MIGHT DEPEND ON IT.

Across

1. First letter of your department

Down

1. First letter of the (hint) Alphabet.

We would like to thanks our sponsors of the Cornboil:
